erfi are specialists for complete working place systems, equipment for laboratories, workshops and assembly tables, measuring and testing devices, didactic training systems as well as testers for electric safety and function.

Our expertise is documented by comprehensive know-how and unequalled experience in 55 years company history.

As initiators and market leaders for electronic laboratory equipment we stand for topmost innovations.

On a total production area of more than 8600 m² all products are developed and made in-house, using the most modern machines and storage systems.

erfi dispose of a high vertical range of manufacture and thus ensures high flexibility.

We set great importance to value creation in all parts of our company. All electronic devices and all laboratory furniture systems are manufactured by ourselves. Only this guarantees the unequalled product quality.

The newly built production hall in Freudenstadt sets standards and due to the newly introduced erfi production system (eps) for all product groups, a consistently high quality is ensured.

Your demands are for us the ultimate benchmark. With this comprehensive catalogue we show you at first the new buildings of our company, the modern architecture of which reflects erfi's claim for leadership in design.

We gladly invite you to our new customer service centre. On a tour through the erfi company you witness the formation of all electronic devices and components of laboratory furniture, followed by a professional product presentation.

*Managing directors and owners
Ernst and Andreas Fischer*

Also with the architecture of our buildings we put into practice our claim for leadership in design: Form follows function!

Welcome to erfi!

erfi instruments – The new benchmark

erfi instruments – The most comprehensive programme of 19” plug-in device systems

erfi instruments are the result of more than 50 years of research work, development and production.

erfi instruments are representative for the range of electronic products made by erfi and the 3 device systems linked with it:

- **acto**[®]
The modern laboratory insert plate system for compact applications
- **highlab**[®]
The professional 19” laboratory device system of excellent design and high functionality
- **basic**
The professional 19” laboratory device system with an alternative design of the front and the control elements.

As first manufacturers and founders of the market for technical working place systems in the field of electrical engineering and electronics, erfi developed in the early 60s 19” plug-in devices such as regulating power supplies, AC power supplies, multi-meters, function generators, oscilloscopes and many more. erfi instruments offer the largest product variance in the field of plug-in device technology.

Due to the consistent further development it is now possible to present 3 device systems with the most modern electronics and software for almost all metrological tasks.

The insert plate system acto is the basis of the product range erfi instruments. acto is a very efficient small instrumentation system which meets the requirements of many lower and average performance categories.

For more exacting performances, the Profi-19” device systems highlab and basic are available. With more than 500 different instruments the benchmark is set on the market for 19” plug-in devices. The family-run company erfi develop and produce all instrumentation themselves. An ultramodern test facility ensures to meet highest quality demands. The soldering processes are carried out in the factory by means of high-grade soldering machines, using Wörthmann nozzles and lead-free technology.

Many erfi instruments such as power packs, function generators and safety testers are now equipped with a modern processing technology. Besides the hardware development department, the necessary software development is an inherent part of the erfi development team.

The thus acquired expertise ensures our independence and guarantees highest flexibility. With the present compendium erfi newly set the benchmark on the market of electronic 19” plug-in devices.

The 3 device systems from erfi at a glance:

Due to 3 comprehensive device systems erfi-instruments offer today modern and powerful devices in the field of electronic laboratory equipment and testing systems for electric safety and function. With this comprehensive range of products, the appropriate solution for your particular application is readily available.

acto® - The new powerful insert plate system

A special feature of this tightly arranged basic system is the low installation height (113 mm) and the low installation depth. The system is suitable in equal measure for laboratory, assembly and training equipment.

The width of the devices depends on the 19" partial plug-in technology. (7 module widths, 1 module width = 5,08 mm). For high packing densities the system is combinable with the 19" device systems.

highlab® - 19" device system of excellent design and extraordinary good functionality

The professional 19" device system highlab is characterised in particular by its high-grade design and its extraordinarily good operating concept. Several design prizes were awarded to this system.

Sandwich design:

The front of the device is of sandwich design. On a solid mounting plate all operating and display elements are installed. The attached graphic front panel ensures the flush installation. Due to the sandwich design the modern operating elements can be so designed that no caps or other components can be removed or damaged. This is of special advantage in the field of training. **(Safety feature against vandalism!)**

Graphic operating interfaces:

The graphic panel is made according to the Seo-photo-process which means the inscription is absolutely abrasion-proof and embedded underneath the anodised layer.

Additional grid patterns allow an unequalled, high-grade and well structured front panel.

basic - 19" device system – The alternative in design

basic follows also the principle of the 19" insert technique. Each highlab device is also available in the basic design line.

basic differs from highlab by its front panel, design and operating elements. The circuit technology is identical.

The system is characterised in particular by its mechanically high-grade, smooth surface.

The smooth surface is dirt-repellent.

Due to a special two-layer paint finish and the multi-component print, the surfaces of the front panel are highly resistant against shocks, scratches and chemical stress.

The thus obtained surface quality is clearly superior to any screen printing method.

Device system highlab® with furniture system varantec®

Device system basic with furniture system varantec®

Device system basic integrated in the furniture system ABZ®
(Example of a motor test station)

Device system acto[®] with furniture system ABZ[®]

Electronic laboratory for the industry

*Height adjustable corner combination:
By a hand crank (alternatively motorised height adjustment) the complete
table combination can be adapted in height.*

Ergonomically designed working places

Didactic trolley

*Didactic Mobil (trolley for training) equipped with erfi didactic teaching materials:
Test of automation technology with PLC S7 board inclusive model "traction module",
frequency inverter board, VDE 0701 and 0702-test
Electric machines: AC asynchronous error simulator.*

Complete laboratory equipment

Furniture system varantec C with aluminium cabinet system varantec select.

Device cockpits equipped with device system highlab.

Integrated lighting systems and DIN A4 experimenting frames.

Complete laboratory equipment

erfi laboratory working place with 19" device system basic and erfi didactic teaching materials

erfi didactic trolley

Complete laboratory equipment

*Furniture series varantec with 19" device system highlab
Equipment with 19" swivel attachments (foldaway by electric motor)*

Complete laboratory equipment

Experimenting frames equipped with erfi didactic teaching materials

Theory and practice in one room!

In the middle of the room, the table series varantec with round feet are used for theoretical instructions.

Complete laboratory equipment inclusive tele-control software highlink® power

Complete laboratory equipment, multifunctional with erfi foldaway tables

With the modern tele-control software highlink Power from erfi, all foldaway attachments are retractable / extendable at the push of a button.

Foldaway attachments being extended.

Foldaway attachments being retracted by half.

Foldaway attachments being completely retracted.

Furniture system varantec® with 3 HE/19" table attachments and 19" device system basic

Laboratory system equipment varantec with 19" device system basic and erfi didactic teaching materials (VDE tests, motor defect simulator, PLC S7 board and frequency inverter board for the automation technology).

Perforated plate system for experimenting, integrated in the working place. The wall units are uncluttered and transparent due to their glass fronts.

Complete laboratory equipment with integrated training rooms

Theory and practice being united.

Laboratory with suspended wall cabinets. Smooth-running sliding doors allow the quick and easy access to didactic materials.

Laboratory equipment – networked and tele-controlled by the software highlink® Power

Equipment for training in the vocational training school 5 in Linz:
Aluminium furniture system varantec C with integrated 19" device system highlab and aluminium cabinet system varantec select.

PC tables for theory of the series varantec 4.

Multifunctional due to 19" swivel attachments. Completely tele-controlled and networked.

19" highlab device system with 3 HE/19" swivel attachment, movable experimenting frame with perforated plate.

Laboratory table equipped with power pack, variable isolating transformer, function generator and many more. In the background: wall unit system and conference room with trapezoidal tables

The erfi cable management system

Vertical cable channel system
varantec MAX, interior cladding
with high-quality brushes

The varantec
system with aluminium profiles

- 4 spacious cable chambers (K1 – K4)
- 1 central pipe (Z)

LED lighting technique from erfi !
The well known highlight lighting technique is now also available in LED design!

All-rounder multifunctional pull-out (optional: tiltable)

Vertical cable channel system varantec MAX, interior cladding with high-quality brushes

Cable flap inwardly retractable

High-volume cable tray 400 x 200 mm) (height x depth)

Example of cable guiding

All-rounder multifunctional pullout for the professional storing of tools, media adaptor, media guiding and more

The all-rounder is integrated in the device cockpit and thus forms one unit.
For tidiness at your working place!

The all-rounder can easily be opened and is well accessible. Optionally, it can be tiltable downward.

Useful detail:
Tiltable key head!

Selection chart			Dimensions of the multifunctional pullout	
Reference No. integrated in the device cockpit	Reference No. integrated underneath the shelf	suitable for table width	Height mm	Depth mm
V 24.9.112	V 24.9.212	1200 mm	75	320
V 24.9.116	V 24.9.216	1600 mm		
V 24.9.118	V 24.9.218	1800 mm		
V 24.9.120	V 24.9.220	2000 mm		

Option:
Additional price for the tiltable multifunctional pullout
Reference No. V 24.9.001

The all-rounder is lockable and thus protects your valuable tools or other articles of value. Due to the complete integration in the cockpit, the media supply to the built-in units and in the rear vertical varantec Max-channel is very easy.

The innovative cable flap from erfi.
Retractable, with 2 cable feedthroughs and central opening position.

German patent application 10 2011 011 644.3 and 10 2011 011 645.1

Overview opening procedure

Two elegant brush rails lengthwise to the table top!

One finger touch with quick access!

Touch and be amazed!

the cable flap slides in its central position without any effort ...

... and is parallel movable to the rear

into its complete opening position!

Cable flap retractable with 2 cable feedthroughs.

erfi present a completely newly designed cable flap which offers considerable advantages to the user.

One Finger Touch with Quick Access: An invention of erfi.

Considerable functional advantages compared with all other available solutions:

(German patent application 10 2011 011 644.3 and 10 2011 011 645.1)

- Cable flap retractable with 2 cable feedthroughs and central opening position
The system is equipped with 2 elegant brushes which run lengthwise to the table top.

**Advantages due to 2 cable feedthroughs:
(German patent application 10 2011 011 644.3)**

1. By providing two cable feedthroughs at the opposite longitudinal edges of the cable channel cover it is possible that, as required, the cables can be fed through into the cable channel from the front or from the back.
2. This allows to meet the high space requirement on the one hand and, on the other hand, a good and easy accessibility.
3. Due to two cable feedthroughs separate cable types such as a measuring cable and mains cable can be fed through separately and clearly.
4. It is possible to recognize the cables outside the channel at on-sight.
5. Inside the cable channel this separation can be maintained.
6. Due to the fact that only the rear brush rail is fitted to the cable flap, it is guaranteed that the cable flap does not project beyond the table top at any moment during the opening/closing movement.

Optimal separation of cable types, recognition of cables at one sight

Also during opening and closing, there is no overhang.

The innovative cable flap from erfi.
Retractable, with 2 cable feedthroughs and central opening position.

Quick access – One Finger Touch: With one movement of the finger opening and closing is possible. Touch and be amazed.

Advantages due to the central opening position:
(German patent application 10 2011 011 644.3)

1. Quick access – quickly accessible with One Finger Touch

The cable flap slides in a central position during opening almost without any effort.

The cable flap can be opened and closed easily and quickly with one finger (One Finger Touch). The fitting method developed by erfi allows the advantageous function “Quick Access and One Finger Touch” without having to reposition ones hand.

Within a short moment of time the cables are accessible. With the slogan “Touch and be amazed” you are going to enjoy sorting your cables.

2. Excellent accessibility due to the symmetrical central position

Due to the symmetrical central position of the cable flap, the opening of the cable channel, accessible from the top, is divided in two equally sized areas so that both areas are well accessible in the same way.

The quick access function allows that the cable flap slides quickly and easily in its central position and thus gives quick access to the already pre-sorted cables.

3. Sorting of cables

The cables are permanently sorted during opening and closing. In contrast to other systems on the market which swivel the cable flap at the front and rear edge, erfi break new grounds. For the first time the cable flap is intentionally positioned in the central area of the cable channel. This allows the quick access with cable sorting function, feeding through the cables separately in a front and rear area.

4. The complete opening position

The cable flap is movable parallel from the opening position in the central area of the cable channel into the complete opening position in a border area of the cable channel.

Quick access: With one movement of the hand the cable flap is pushed from the central position into complete opening position and thus allows the optimal access for extensive cabling.

Good accessibility due to the central position. The cables are permanently sorted during opening and closing.

Quick access: With one movement of the hand the cable flap is pushed from the central position into complete opening position and thus allows the optimal access for extensive cabling.

For extensive installations the big opening area can optimally be used. The sliding procedure is easy and does not require any physical effort thanks to the special guiding.

5. The generously designed cable channel

Underneath the cable flap there is a large cable channels for a high volume of cables.

Dimensions of the cable channel:

Overall height 400 mm, depth 200 mm, width: as per the table width.

6. Perfect cable sorting in the cable channel by the optional separating wall (measuring cable and current-carrying cables)

On request the cable channel can be equipped with an additional integrable separating wall for the professional cable sorting. Thus, the cable sorting which is already feasible due to the 2 openings in the cable flap, can consistently be carried on in the cable channel. To avoid the cross-talk between measuring and current-carrying cables, the intermediate wall is made of metal (shielding).

7. Easier accessibility / enlarged working area

Besides the advantage of the cable sorting, the access for feeding through the cables in the front brush rail has been clearly improved. Especially with deep tables of 1 m depth the access to the cables fed through at the table end, is difficult from the front. When using the rear brush, however, the working area is optimised.

Large cable channel for a high volume of cables

Optional separating wall for the perfect cable sorting

The innovative cable flap from erfi. Retractable, with 2 cable feedthroughs and central opening position

Good accessibility of the cables due to the front brush rail, optimal ergonomics. (1) Optimization of the working area by using the rear brush (2).

Thus, the system offers considerable advantages with respect to:

- Cable sorting
- Accessibility and
- Ergonomics

8. Ergonomics

During development special attention has been paid to the fact that the cable flap does not project beyond the table top at any time. In the central and complete opening position the vertical cable flap is lowered. Thus, the cables are fed through so that they do not have to be fed through a projecting cable flap.

9. Electrification

The system allows the elegant integration of multiple socket strips. The same can be mounted on the underside of the cable flap. In the complete opening position the consumers can be quickly electrified. In the closing and swivelling movement the cable is carried along and does not have to be lifted at any time.

At no time does the cable flap project beyond the table top thanks to a well-thought-out flap system.

10. Cable channel lighting with LED light

Integration of multiple socket strips optionally possible on the underside of the cable flap.

The modern erfi concept offers optionally the channel lighting with a modern LED light.

To avoid that the LED lighting interferes with the cable sorting, it is embedded on the underside of the cable flap. After opening of the same, the LED light shows downwards and ensures the optimal lighting of the cable channel.

11. Integrated adjustable brake function

The almost effortless operation of the cable flap ensures a high degree of safety. An integrated brake takes care that the cable flap slides smoothly and easily inside the cable channel during opening. An abrupt opening is thus precluded. The brake is so designed that it does not hinder the closing of the cable flap.

Retractable cable flap with a spacious cable trough

	suitable for table width	Ordering numbers
400 x 200 mm (H x T)	1200 mm	V 24.9.312
	1600 mm	V 24.9.316
	1800 mm	V 24.9.318
	2000 mm	V 24.9.320

(For integration in a varantec table type 1)

Additional articles

	suitable for table width	Ordering numbers
Option: Separating wall made of metal H= 120 mm	1200 mm	V 24.9.412.1
	1600 mm	V 24.9.416.1
	1800 mm	V 24.9.418.1
	2000 mm	V 24.9.320.1

	suitable for table width	Ordering numbers
Option: LED lighting (for 1 cable channel)	1200 mm	V 24.9.412.2
	1600 mm	V 24.9.416.2
	1800 mm	V 24.9.418.2
	2000 mm	V 24.9.320.2

On request, the retractable cable flap is also available with 1 brush only.

erfi goes ethernet – tele-controllable equipment technology from erfi

All tele-controllable devices and instruments in this catalogue are marked with this logo and are, therefore, easily findable. All tele-controllable devices can be integrated in the modern tele-control software highlink Power. The networking with integrated ethernet interfaces is a matter of course. As an alternative to the ethernet interface technology, almost all devices are deliverable with a serial interface RS232 or with interface USB 2.0.

erfi are the pioneers on the market of electronic laboratory equipment and as a first company, presented in 2002 tele-controllable and networked laboratory devices which revolutionized the total market due to the innovative software highlink.

erfi is presenting the present tele-controllable device generation with innovative microprocessor technology. The new devices contain a high level of self-contained intelligence with many innovative functions for training and work.

The following product groups belong to the tele-controllable devices, such as:

- Variable direct current sources (regulating power supplies)
- Variable alternating voltage sources (regulating transformers)
- Variable three-phase supplies (three-phase regulating transformers)
- Function generators
- Digital multi-meters
- Power measuring devices
- Oscilloscopes
- Insulation and earth conductor testing equipment

Example: tele-controllable three-phase supply

erfi goes ethernet – The highlights of the leading erfi equipment technology

Option:
Ethernet interface
(rear)
Reference No.:
NWT 1.106

Option:
USB 2.0 interface
(rear)
Reference No.:
NWT 1.107

Option:
RS232-C serial inter-
face (rear)
Reference No.:
NWT 1.108

Highlights of the modern equipment world:

The new generation of μ -processor controlled regulating power supplies
The modern regulating power supplies from erfi possess an unequalled level of functionality due to the latest processors. This functionality is protected by a utility model.

German utility model No. 20 2004 004 623

Technical highlights:

- Ethernet, USB 2.0 and RS 232 interfaces (option)
- Interface at the rear or front is optionally available
- Plug-and-play function
- Control deviation of only 0,2 mV / A
- Minimum residual ripple: 0,2 m Veff
- Fastest control setting time: 15 μ s
- Integrated ramp generator for long-term tests
- Chart function by means of ramp generator
- Many programmable parameters for flexible triggering
- Easy handling due to simple ASCII block commands
- Self-contained measuring chart for voltage and current values
- Continuous quick measurements with fast processors
- Thus, superior metered value transfers

The modern programmable function generator family

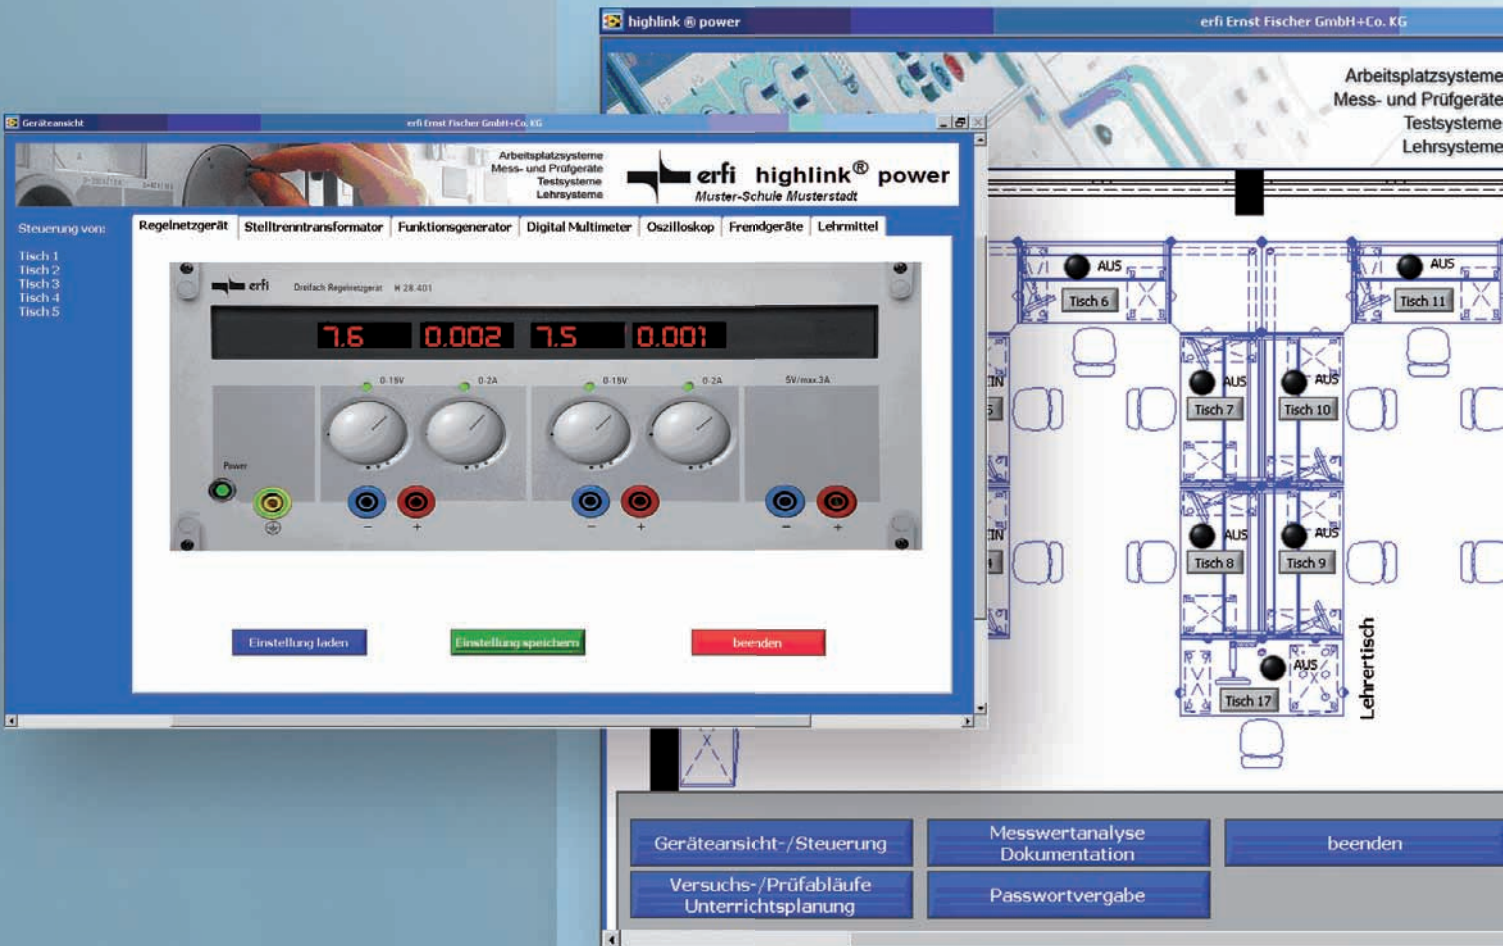

Amplitudes of up to 30 V_{ss}, frequencies of up to 20 MHz, occurrence counter etc. are only some of the features which redefine the benchmark in this product group.

Technical highlights:

- Ethernet, USB 2.0 and RS 232 interfaces (option)
- Interface at the rear or front is optionally available
- Plug-and-play function
- **All functions are tele-controllable and back-readable**
- **Complete measuring device for frequency and voltage**
- **Amplitudes up to 30 V_{ss}**
- **Frequencies of up to 20 MHz**
- **Ramp generator**
- **Occurrence counter for non-periodical occurrences**
- **Attenuators 0-20 dB, 20 dB and 40 dB in addition**
- **Freely programmable single current pulse**
- Internal Sweep (start and stop frequency, wobble frequency)
- Frequency counter up to 100 MHz
- Many functions: Sinus, triangle, rectangle, saw tooth
- PWM from 10 % to 90 % programmable
- VCO input, PWM input
- DC offset -10 up to +10 V

highlink®Power – The software for the easily operated telecontrol of complete laboratories

erfi are the first company worldwide offering completely networked electronic laboratories and, being the leader on the market, have set new standards.

The further development of the erfi software which has been on the market since 2002, is the corollary to secure erfi's position on this market segment.

The result of the consistent software development for the networking of laboratories has a new name:

highlink®Power

The innovative software structure of highlink Power is the consolidated combination of all functions which no other instrument has.

At a glance all functions are elegantly and easily controllable in one laboratory. In addition to all erfi device functions also the conditions of the electronic laboratories can be controlled and inquired.

Switch over to the future and link your laboratories with highlink Power!

highlink Power: The benchmark in the field of networked laboratory systems!

highlink®Power

The structure:

The software package highlink Power is a modern instrument which is suitable for professional as well as industrial applications.

Highlights:

- Representation of the actual room layout
- Thus immediate survey of the conditions of all laboratory tables
- Individual control of individual working places from the table of the instructor
- Most modern network engineering (LAN, WLAN, ...)
- Control / release of individual function groups
- General release
- 50 V
 - 230 V / 400 V
 - Retractable / swivel tables
 - Visualisation of all conditions
 - Emergency stop function
 - Position of the retractable / swivel tables
 - Release given / not given
- 50 V / 230 V / 400 V release
- Forming of groups of tables
- Remote control of all groups of devices and functions
- Photo-realistic representation of the device
- Recognition of failures and prevention of operating errors (failure manager)
- Optimal lesson plan due to time-controlled parameterisation of all
 - functions (immediate beginning of the lesson and thus, optimal exploitation of the teaching times)
- Increased teaching quality
- Any number of tests and parameterisations per student's place storable and recallable at any time (configuration of the laboratory place)
- Professional logging of the measurement data with integrated reporting generator
- Student-related assessment possible for individual tests
- Representation of measurement data also in HTML format
- Recording and play-back functions of the gradients
- Simulation of the gradients to be expected (nominal / actual condition)
- Password management for individual access rights
- Limitation of the range of adjustment for individual working places
- Vis- Visualisation and transmittance of individual screen contents to any number of working places
- Excellent didactic teaching methods
- erfi laboratory manager
- In case of comprehensive equipment individual floor plans can be selected and tele-controlled by the networking. From the instructor's room all necessary functions of the specific room can be adjusted.
- Integral concept due to the good integration of the erfi teaching system contained in the programme erfi didactic:
 - Automation technology with logo! and S7
 - Building automation
 - and more

highlink®Power – The software for the easily operated telecontrol of complete laboratories

Visualisation of the laboratories

Due to the efficient and powerful software package the laboratories can be visualised within a very short time. All conditions are detected at a glance.

In bigger buildings the erfi floor plan manager allows the free selection of the room. If required, this package permits even access to rooms in other buildings.

Activation / control of individual function and device groups

Besides the current 230 V and 400 V voltage supply, modern laboratory tables are equipped with modern DC power supplies (low voltages) and measuring devices with intelligent functions. The individual devices and function groups can easily be controlled.

Also the up/down movement of the foldaway and swivel tables can be easily controlled from the instructor's place on the push of a button. At the same time the conditions of the various laboratory tables can be visualised (see table4).

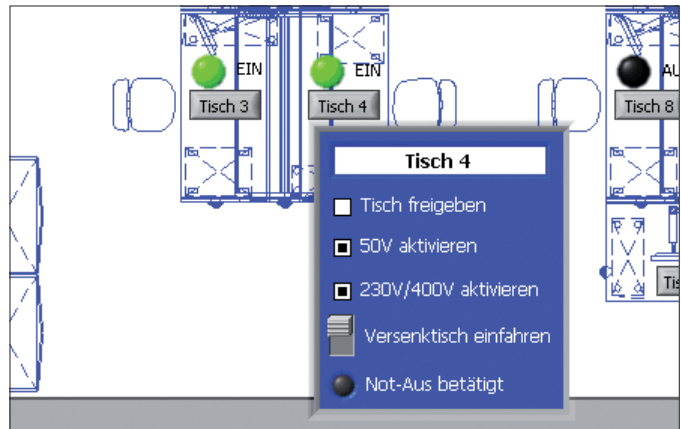

Photo-realistic visualisation of the device

Due to the modern software structure highlink Power ensures the homogenous integration of all erfi devices and devices of other current makes inclusive erfi didactic. Of course, all established makes of teaching material can be implemented in this concept without involving increased expenses.

The package shows the user all devices with a front panel true to the original inclusive all operating elements.

The advantages are evident. For the user it does not matter whether he operates the device directly or through the software. No tedious training

times are required. On starting the software, operation can be started at once.

In addition, highlink Power ensures a very quick communication with the device concerned so as to avoid any delays. Benefit from the many years experience in the field of software development.

Example: Visualisation of an erfi double regulating power pack

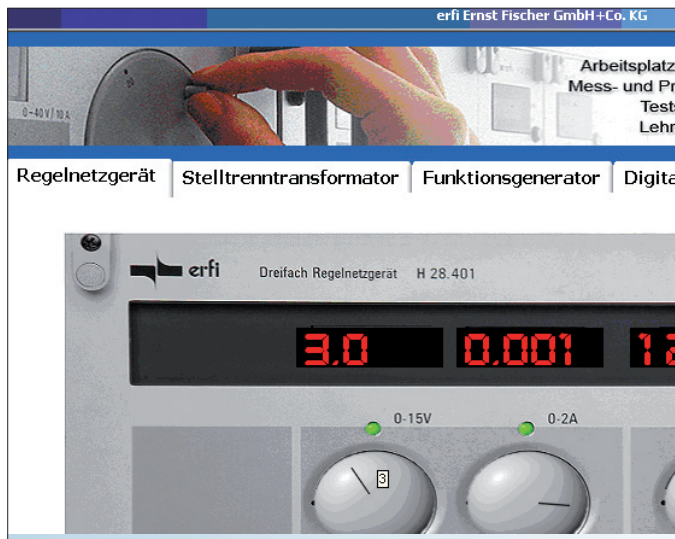

Example: Visualisation of an erfi function generator.

High protection of the hardware by programmable limits

highlink Power guarantees the protection of your hardware at any time. Due to the possible limitation of individual device parameters such as current limiting (output OFF function) it is ensured that the connected

measuring hardware or electronics resp. does not get affected. Longsome repairs caused by operating errors are precluded.

Example DC source:

Power pack with tension and current limiting (U_{max} and I_{max})
Limitation of the output power by the output OFF function

Example of a sensitive measuring technique:

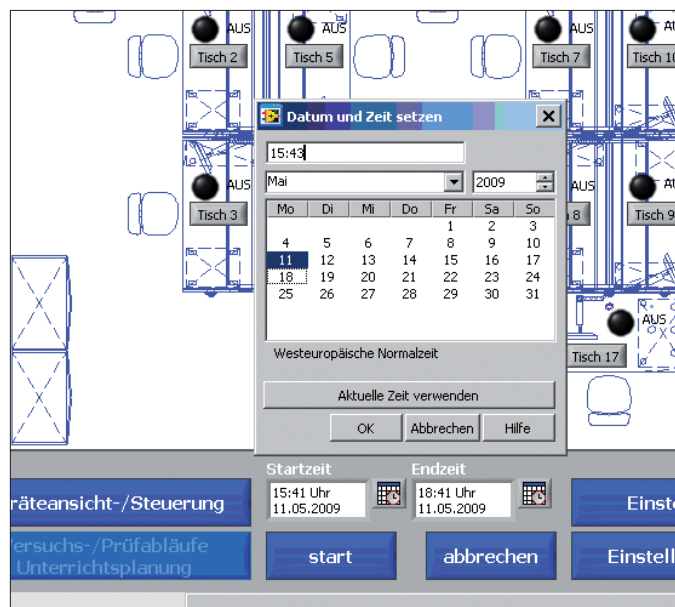

Digital multi-meter with respective measurement ranges

The planning manager for training and examination (optimal time management)

Start your lessons immediately without losing time! The complete package allows the perfect time control of your lessons. Within the planning of the lessons the individual device parameters can be pre-adjusted per student's working place and student and can be linked with a clearly laid out yearly time planning. When reaching the point in time, all working places contained in the planning are automatically adjusted to the desired configuration. For example, retractable tables move automatically to the desired position and the power supplies are configured to the respective maximum currents for the applicable test.

highlink Power allows the easy individual programming of the student's working places and thus ensures a productivity of the training which has never been achieved before. Adjustment times required by the students prior to starting the test are no longer needed!

Already in 2002 erfi launched on the market the telecontrol software highlink and, therefore, possesses the longest experience in the field of tele-controllable laboratories. This fact is clearly documented by our trade mark rights for tele-controllable devices (see page 47, utility model protection).

highlink®Power – The software for the easily operated telecontrol of complete laboratories

Complete integration of erfi teaching materials (E-learning) – erfi didactic
erfi didactic is an own brand name of the company and comprises a modern teaching material programme for the automation technology, drive engineering, building automation, error simulation, motor simulators, installation technique and more.

Many erfi training devices are equipped with an interface and thus allow to integrate the devices in an intelligent way in the training structure by means of highlink Power.

Besides the well-known E-learning a modern tool is handed over to the student.

The different tests are stored in the software and can be processed by devices with standard interfaces. The instructions for the tests are visualised and the student is guided didactically.

Up to date documentation by reporting generator:

highlink Power permits different simulations prior to starting the test. Gradients to be expected can be displayed graphically and can be compared later with the actual process.

The measurement data and the documentation are automated and the data are available in HTML, Excel or other formats. At the push of a button, the data streams can be relayed to other programmes (Excel, Internet explorer, etc.).

The integral concept provides a professional and up to date data management.

Example of integration of the test: automation engineering, learning area 7 to 13

Detailed test instructions giving assistance to the instructor and the student are normal for erfi and are included in the scope of supply.

The measurement data are visualised in a chart in real time in a chart during measuring and simultaneously in a graphic chart.

At the push of a button a HTML reporting for Internet explorer or other browsers is made.

Visualisation of devices of different makes

highlink Power supports the integration of devices of a different make. Depending on the design of the device and the customer's request, the respective functions are integrated.

High safety due to the password management

Due to a defined administration level, the user rights can be determined individually for each instructor and student. In addition to the individual access control to the tests, also the programme modules device control, training plan, measurement analysis and documentation as well as password management are controlled individually. This ensures that pre-adjustments cannot be altered unknowingly.

The long lasting experience of the erfi software development team pays off and guarantees the safe and trouble-free training.

erfi - Network engineering

The erfi network engineering uses consistently the most modern Ethernet technology.

Each laboratory place is equipped with intelligent Ethernet compatible devices which optionally can be integrated in a self-contained experimenting network or in an existing in-house network. Depending on customers requirements, the network is designed accordingly.

Due to the co-operation with renowned solution providers in the field of communication and data networks, erfi has great experience with respect to network engineering.

The references in the field of “tele-controllable laboratories” documents this expertise.

There are two different solutions:

1.) Self-contained experimenting network, physically separated from the remaining network

With this solution each PC is equipped with a second Ethernet connection (second network interface card).

This ensures that no failures happen within the in-house network.

The instructor and the students have access to the network through the second network interface card. With this solution a switch is sufficient for networking the room.

Depending on the customers requirements the switch can already be considered by erfi in the planning phase or can be provided by the customer.

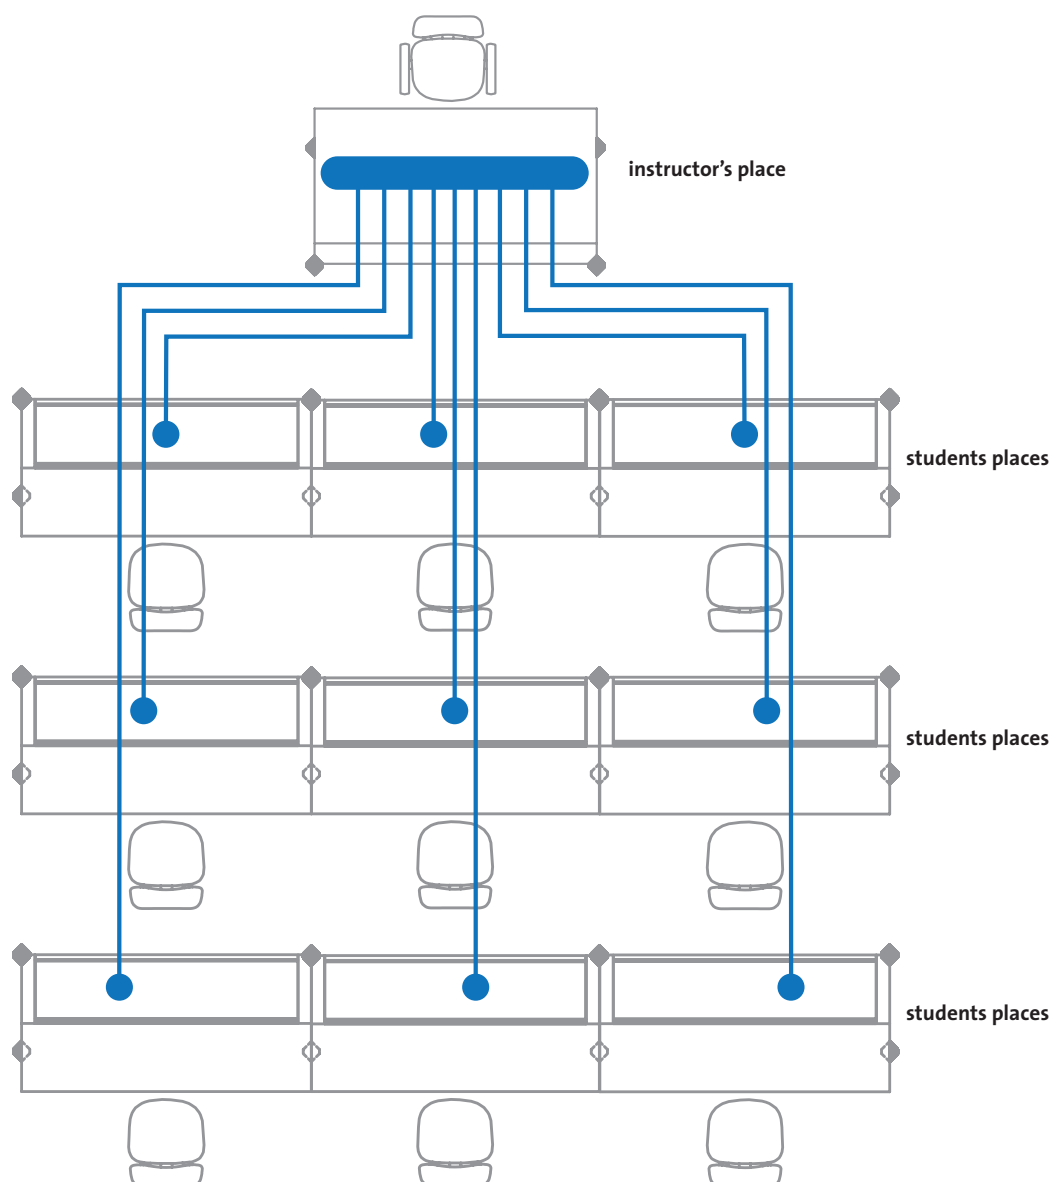

2.) Integration of the experimenting network in the existing network

This solution is applied when the PC's cannot be equipped with a second network connection. Then a virtual network is build up.

With this solution a VLAN switch is required.

Depending on the customers requirements the VLAN switch can already be considered by erfi in the planning phase or can be provided by the customer.

Example: Self-contained experimenting network

Software packages:

Reference No.	Product description	
HP 1.100	<p>Software package highlink Power student's package twelve licence for 12 student working places Complete package inclusive all described functionalities</p> <p>Note: The release of different device groups such as low voltage, alternating voltage und three-phase current as well as the control for the swivel/retractable tables and EMERGENCY STOP surveillance will be designed for you. The necessary hardware (contactors and relays) for activation of the individual device groups is quoted for in the separate position "system integration".</p>	
HP 1.101	<p>Software package highlink Power instructor package single licence for 1 instructor working place Complete package inclusive all described functionalities and inclusive laboratory room manager</p> <p>Note: The release of different device groups such as low voltage, alternating voltage und three-phase current as well as the control for the swivel/retractable tables and EMERGENCY STOP surveillance will be designed for you. The necessary hardware (contactors and relays) for activation of the individual device groups is quoted for in the separate position "system integration". The erfi laboratory room manager which allows to change between the different rooms is contained in our scope of supply from the second room.</p>	
HP 1.102	<p>Software package highlink Power industrial package single licence for 1 industrial electronic working place (single user licence) Complete package for triggering the respective integrated tele-controllable erfi device with Ethernet interface inclusive automatic measured value acquisition and analysis for 1 single working place.</p> <p>Note: The difference of this package is that among other things, the graphic floor plan visualisation for several places is not included. For more extensive laboratory equipment the floor plan (plan for positioning all laboratory tables) can be implemented on request.</p>	

LabVIEW device driver
free download
www.erfi.de/software

The erfi device drivers are ideally suited for all developers who use the development tool LabVIEW. The different functions of the erfi devices are summarised in VI's (virtual instruments) and can easily be integrated in the project concerned.

HP 1.200	for erfi regulating power packs
HP 1.201	for erfi function generators
HP 1.202	for erfi digital multi-meters
HP 1.203	for erfi regulating transformers (AC (single-phase and three-phase)
HP 1.204	for erfi oscilloscopes
HP 1.205	for erfi power measuring devices
HP 1.206	for erfi insulation testers
HP 1.207	for erfi earth conductor testers

erfi – Network engineering

NWT 1.104	erfi network module ZFor the control and surveillance of individual table functions <ul style="list-style-type: none"> - Release of the mains module - Release 50 V / 230 V / 400 V - EMERGENCY STOP function - Up / down movement swivel table - many more - 8 digital I/O's to be activated by Ethernet interface
NWT 1.110	System integration consisting of all contactors and relays pertaining to the complete functionality, for the release of all groups and devices
NWT 1.105	W-LAN-Router For the wireless control of the laboratory rooms.eightfold access point

erfi – device interfaces

The latest erfi device generation (erfi instruments) is nowadays equipped with an innovative microprocessor technology. No matter whether this concerns DC power supplies (regulating power supplies), AC sources, function generators, digital multi-meters or other measuring devices, erfi offers always the right link to the outside world. All interfaces are

serially lead through on the rear and are thus networked invisibly with the 19" attachment or 19" cockpit. On request, the interfaces can be lead through to the front to a separate insert board (7 TE).

Insert plate system acto®

The insert plate system is multifunctional and can be integrated in the following system components:

- 1 Supply terminal in the table top
- 2 System channel
- 3 Energy attachment
- 4 Energy cockpit
- 5 19" combined attachment
- 6 19" combined cockpit
- 7 Swivel attachment

Insert plate system acto® System explanation

The insert board system is a registered trademark of the erfi company and besides the low installation height of 113 mm it is particularly characterised by its innovations. Due to the new developments in the past two years, this system has turned into a professional programme of compact devices. By the great variety of functions, this system contributes considerably to a sensible equipment of modern laboratory working places. acto is ideally suited for classrooms, production facilities, assembly and development departments. The low installation height allows constant eye contact in the room.

Innovations of the system acto®

- Tele-controllable regulating power packs (Ethernet, USB 2.0 and RS232-C optional)
- Tele-controllable function generators up to 20 MHz with integrated counters up to 100 MHz (Ethernet, USB 2.0 and RS232-C optional)
- Outstanding power and control data of power packs and function generators (control accuracy <2m V/Am control speeds <15µs)
- Most modern software for the networking of classrooms and research laboratories
- Module grid width in 19" partial plug-in technique as per DIN 41494 part 5

Technical dimensions:

Installation height: 113 mm

Installation width: 7 TE grid width

Definition TE = module width

1 TE = 2/10 inch = 5,08 mm

7 TE correspond to 35,56 mm

Due to the 19" partial plug-in technique as per DIN 41494 part 5, acto allows a high module flexibility. Each insert plate is designed in a grid of 7 TE and, therefore, the available space can optimally be used for integration. Due to the tight grid of 7 TE, a high packing density can be achieved.

In the same way the insert plates can easily be installed in combined attachments and combined cockpits with the big 19" device series high-lab and basic.

Measurement table (19")
Module width in mm

7 TE	= 35,56 mm	
14 TE	= 71,12 mm	
21 TE	= 106,68 mm	
28 TE	= 142,24 mm	
35 TE	= 177,80 mm	
42 TE	= 213,36 mm	
49 TE	= 248,92 mm	
56 TE	= 284,48 mm	
63 TE	= 320,04 mm	
70 TE	= 355,60 mm	
77 TE	= 391,16 mm	
84 TE	= 426,72 mm	
98 TE	= 497,84 mm	

Possible integrations

The insert plate system acto can be installed in the highly productive furniture system components varantec and ABZ from erfi. All components of the insert plate system are functional, wired and tested when being integrated in the respective holding fixtures.

Design of the front panel

The aluminium front panels are of high quality, anodised and refined. The surface paint finish is deliverable as per customers request. The front panels are particularly resistant against shock, scratches and other wear and tear.

1 Integration in the system channel

Advantages of the anodised front panel:

In the case of system channels with integrated lighting, the table surface is additionally brightened up by the anodised front panel and contributes significantly to a positive working atmosphere. Technique in details!

2 Integration in the supply terminal

3 Integration in the swivel attachment

4 Integration in the energy attachment, depth 150 mm

5 Integration in the energy cockpit, depth 150 mm

6 Integration in the energy attachment, depth 320 mm

7 Integration in the energy cockpit, depth 320 mm

8 Integration in the 19" combined attachment, depth 360 mm

9 Integration in the 19" combined cockpit, depth 360 mm

Product information: AC/DC sensitive leakage current protective switch (type B)

As an alternative, the erfi safety and switching units can be equipped with AC/DC sensitive leakage current protective switches (type B). In series all models are equipped with pulsed current sensitive earth leakage circuit breakers (type A).

Possible smooth faulty direct currents caused by frequency inverters, alternating-current inverters, photo-voltaic installations and battery chargers, cannot be reliably detected by pulsed current sensitive earth leakage circuit breakers of the type A for sinusoidal faulty alternating-currents and pulsed direct currents.

Faulty direct currents can cause, by pre-magnetization of the converter, that pulsed current sensitive earth leakage circuit breakers do not ensure any more the protective function also in the case of faulty alternating currents.

The AC/DC sensitive leakage current protective switches (type B) detect reliably smooth faulty direct currents and faulty alternating current up

to a frequency of 1 MHz.

For the fuse protection of classrooms (in case of supply by TN or TT-systems) with experimenting equipment, the regulation DIN VDE 0100-723:2005-06 is binding.

If for the supply of experimenting equipment a TN- or TT-system is used, one or several faulty current protective devices (RCDs) with a differential current $I_{AN} < 30 \text{ mA}$ must be provided for.

These faulty current protective devices must be of the type B.

Additional price for AC/DC sensitive leakage current protective switch type B, suitable also for smooth direct currents:

Residual ripple	voltage with nominal load	0,5 mVeff					
Transient time	step change in load from 0 % to 100 %	15 µs					

Tracking power pack

Reference No.	Design	49 TE
A23.050	Tracking power pack ±3 to ±15 V/ 1 A and 5 V/ 1 A, fixed lengthwise controlled	

Technical Data:

Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Fixed voltage supply source

Reference No.	Design	35 TE
A22.050	Fixed voltage supply source 5 V/ 3 A lengthwise controlled	

Technical Data:

Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Fixed voltage supply source

Reference No.	Design	56 TE
A24.050	Fixed voltage supply source ±5 V/ 3 A lengthwise controlled	

Technical Data:

Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Direct voltage supplies / fixed voltage supply sources

Note: Installation height: 113 mm

Fixed voltage supply source

Reference No.	Design	42 TE
A23.051	Fixed voltage supply source 24 V/ 1,5 A cyclical power pack	

Technical Data cyclical power pack:

Output specifications:	control deviation - change of input voltage: $\pm 0,2$ % max. - change of load: $\pm 0,8$ % max.
General specifications:	temperature coefficient: $\pm 0,01$ %/ C°
Output data:	continuous short-circuit protected, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Reference No.	Design	56 TE
A24.051	Fixed voltage supply source 24 V/ 5 A (10 A-peak) cyclical power pack	

Technical Data cyclical power pack:

	- Double nominal peak capacity when switching-on - Power factor and improvement of harmonics as per EN61000-3-2
Load stabilisation:	192 mV max.
Residual ripple and random noise:	360 mV max.
Output data:	continuous short-circuit protected, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Fixed voltage supply source

Reference No.	Design	63 TE
A24.052	Fixed voltage supply source 2 x 12 V/ 2 A switchable in parallel and in series resp. lengthwise controlled	

Technical Data:

Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Reference No.	Design	63 TE
A24.053	Fixed voltage supply source 2 x 15 V/ 2 A switchable in parallel and in series resp. lengthwise controlled	

Technical Data:

Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Outputs:	4 mm safety laboratory sockets

Direct voltage supplies / fixed voltage supply sources

Note: Installation height: 113 mm

Fixed voltage supply source

Reference No.	Design	70 TE
A25.050	Fixed voltage supply source ±12 V / 1 A and 5 V / 3 A lengthwise controlled	

Technical Data:

Output data: continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel

Outputs: 4 mm safety laboratory sockets
1 Schuko socket 230 V / 16 A in addition

Note: **not insertable in system channels**

Reference No.	Design	70 TE
A25.051	Fixed voltage supply source ±15 V / 1 A and 5 V / 3 A lengthwise controlled	

Technical Data:

Output data: continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel

Outputs: 4 mm safety laboratory sockets
1 Schuko socket 230 V / 16 A in addition

Note: **not insertable in system channels**

Telecontrollable regulating power packs (DC)

Note: Installation height: 113 mm

Technical Data:	
Interface:	optional Ethernet, USB 2.0, RS232-C
Ramp generator:	for any current voltage curve
Ramp parameters:	initial voltage and terminal voltage, speed, length of time per ramp step, number of cycles
Operation:	manual or tele-controlled
Bidirectional function:	output voltage and current limitation programmable, actual measurement transmittance of current and voltage by interface
Plug-and-play:	automatic recognition of device type by highlink Power software or LabVIEW device driver (option)
Output data:	continuous short-circuit protected, lengthwise controlled, switchable in series and in parallel
Control deviation in case of change of load from 0 to 100 %	
voltage:	2 mV/A
current:	0,02 mA/V
Temperature coefficient:	
voltage:	0,005 %/K
current:	0,013 %/K
Residual ripple:	
voltage:	0,2 mV_{eff}
current:	0,5 mA _{eff}
Transient time with a step change in load of	
0 % to 100 %:	15 µs
100 % to 0 %:	500 µs
Outputs:	4 mm safety laboratory sockets

Rear interfaces (option)

Reference No.	Interface
NWT 1.106	Ethernet
NWT 1.107	USB 2.0
NWT 1.108	RS 232 C

The interfaces allow the control of the regulating power packs. In addition to the complete device control, erfi software highlink Power takes also over the room control by means of Ethernet interface.

Note:

Front interfaces see page 55
highlink Power see page 48 ff.

Telecontrollable function generators inclusive counter

Note: Installation height: 113 mm

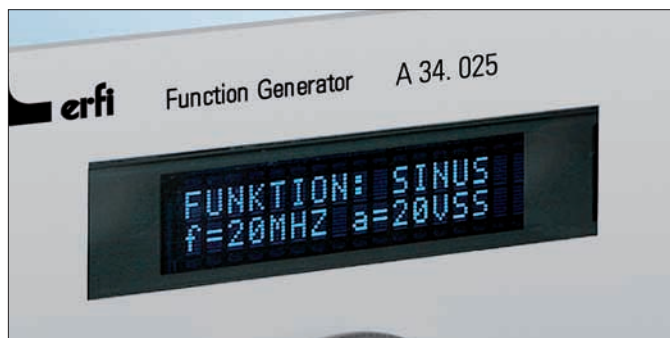

erfi are the first manufacturers of laboratory furniture systems for electrical engineering and electronics who introduced the telecontrollable¹⁹ function generators and 19” regulating power packs in connection with a modern network-compatible software (highlink) in professional working place systems. This is another proof of erfi’s innovation leadership. The completely newly developed function generator family offers outstanding functionalities and parameters such as tele-control by means

of the most modern software, large frequency ranges of up to 20 MHz, amplitudes up to 30 V_{SS} and frequency counters of up to 100 MHz. This new generation of devices meets all imaginable requirements. The multi-lingual menu navigation combined with the elegant shaft encoder and the new Comand function keys emphasise the superiority of this equipment.

Fig.: A 34.025

56 TE

The new graphic display of the vacuum fluorescent technology allows an excellent reading precision even from a distance of 3 m, independently of the reading angle! The display is in blue and has a very high image sharpness and brilliance.

Reference No.	Size	Design
A34.025	56TE	0,1Hz – 20MHz, 20V _{SS} , counter up to 30MHz
A34.026	56TE	0,1Hz – 10MHz, 30V _{SS} , counter up to 30MHz
A34.027	56TE	0,1Hz – 20MHz, 20V _{SS} , counter up to 100MHz
A34.028	56TE	0,1Hz – 10MHz, 30V _{SS} , counter up to 100MHz

- telecontrollable through Ethernet, USB 2.0 or RS232 interface (options)
- comprehensive control software highlink Power (option) or LabVIEW device driver (option)
- innovative menu navigation with modern graphic display in blue
- Comand function keys for the fast access to the main functions
- elegant shaft encoder for the easy-to-operate menu control
- outstanding frequency range up to 20 MHz
- 8-digit frequency counter up to 100 MHz

Technical Data:	
Display:	graphic display in vacuum fluorescent technology, blue, well readable from 3 m distance!
Menu language:	reversible German / English
Operating concept:	elegant shaft encoder with pressure function as well as Comand function keys for the optimal handling
Functions:	Sinus, triangle, rectangle, saw tooth, ramp operation, amplifier, DC, single current pulse, variable pulse duty factor, Sweep, frequency counter, occurrence counter, additional attenuation 20 and 40 dB
Operating modes:	free-wheeling, externally wobblable, (Sweep operation), PWM operation
Frequency range:	0,1Hz -20MHz for models A34.025 and A34.027 0,1Hz -10MHz for models A34.026 and A34.028
Amplitudes:	0-20V _{SS} for models A34.025 and A34.027 0-30V _{SS} for models A34.026 and A34.028
Amplifier:	approx. 20 dB amplification, DC
Single current pulse:	variable, positive current pulse released by a key, adjustable current pulse length up to 1000 ms

Outputs:	20V _{SS} idling for models A34.025 and A34.027 30V _{SS} idling for models A34.026 and A34.028 5V TTL-compatible, 50Ω-output impedance
Inputs:	external, internal PWM In, VCO IN, attenuator: 0-30 dB continuously, additionally 20 dB and 40 dB to be activated through the same bushing
DC offset:	-10V bis +10V, 0V with push-button
Wobble operation, external:	
VCo input:	0-5 V control voltage input for frequency change of max. 1:100
Wobble operation, internal:	Sweep operation, start and stop frequency, wobble frequency: max. 100 Hz in steps of 1Hz
PWM operation:	-2,5V to +2,5V control voltage input for pulse-pause operation
Frequency counter:	
Measuring range:	0,1Hz to 30MHz for models A34.025 and A34.026 0,1Hz to 100MHz for models A34.027 and A34.028
Input:	external, BNC bushing
Input voltage:	0,5V _{eff} to 100V _{eff}
Display:	2 x 16 characters
Occurrence counter:	for non-periodic occurrences

Tele-control for function generators and counters (option)

Due to the available interfaces the new function generators are real all-rounders. The tele-control allows to programme the function generators and the integrated counters.

This functionality permits the integration of the new function generators for automated measuring and regulating operations.

The telecontrollable function generators have been developed for the industrial use as well as for didactic training. They are an ideal and up-to-date tool to utilise fully the many valuable functions

The optionally available software highlink Power and the optionally available LabVIEW device driver allow the easy access to the device..

The following parameters are programmable by means of the optional interfaces (Ethernet, USB2.0 or RS232 within the respective limits:

Selection of operating mode:	free-wheeling, externally wobbable, internally wobbable (Sweep operation, PWM-operation)
Functions/wave form:	Sinus, triangle, rectangle, saw tooth, ramp operation, rectifier, DC, single current pulse, variable pulse duty factor
Frequency:	0-20MHz and 0-10MHz resp.
Amplitude:	0-20V _{ss} or 0-30V _{ss}
DC offset:	-10V to +10V
Attenuator:	0-30dB, 20dB and 40dB
Sweep parameter:	start and stop frequency, wobble frequency
Counter frequency:	can be read out
Occurrence counter:	can be read out

Rear interfaces (option)

Reference No.	Interface
NWT 1.106	Ethernet
NWT 1.107	USB 2.0
NWT 1.108	RS 232 C

The interfaces allow the control of the function generators. In addition to the complete device control, erfi software highlink Power takes also over the room control by means of Ethernet interface.

Note:

Front interfaces see page 55
highlink Power see page 48 ff.

Pneumatic units

Note: Installation height: 113 mm

Pneumatic Units

Reference No.	Design	35 TE
A72.010	Manometer <ul style="list-style-type: none"> - output pressure for coupling 1 and 2: 0 to 3 bar, continuously adjustable, pressure reducer with a locking mechanism and relief pressure valve - output pressure for coupling 3: direct extraction of the input pressure - outputs: all 3 coupling sockets DN 5 self-stopping Input: on the rear side for a hose of 6 mm inside diameter	

Reference No.	Design	35 TE
A72.011	Manometer <ul style="list-style-type: none"> - output pressure for coupling 1 and 2: 0 to 10 bar, continuously adjustable, pressure reducer with a locking mechanism and relief pressure valve - output pressure for coupling 3: direct extraction of the input pressure - outputs: all 3 coupling sockets DN 5 self-stopping Input: on the rear side for a hose of 6 mm inside diameter	

Pneumatic units

Reference No.	Design	14 TE
A71.001	Compresses air output <ul style="list-style-type: none"> - compressed air output: self-stopping compressed air coupling DN 5 operating pressure: max. 10 bar - compressed air input: on the rear side for a hose of 6 mm inside diameter 	

Energy and auxiliary devices

Note: Installation height: 113 mm

RC Logade

Reference No.	Design	28 TE
A12.050	RC Logade For the experimental identification of resistance and capacity. The resistance as well as the capacity can be adjusted by means of a turn-switch.	

Technical Data:

Resistance range:	100 Ohm to 680 kOhm line E 6
Tolerance:	± 2 %
Load capacity:	max. 0,5 W
Voltage:	max. 400 V DC
Capacity range:	100 pF to 680 nF series E 6
Tolerance:	± 10 %
Voltage:	max. 250 V DC

L Logade

Reference No.	Design	14 TE
A11.050	L Logade For the experimental identification of inductance in testing and experimenting circuits. The inductance can be adjusted by means of a turn-switch.	

Technical Data:

Range of values:	1 µH to 4700 µH, graded as per line E 6 (23 values)
Precision:	1 µH to 33 µH ± 10 % 47 µH to 4700 µH ± 5 %
Operating voltage:	max. 100 V DC
Operating current:	max. 63 mA, protected by a microfuse

RC Decade

Reference No.	Design	42 TE
A13.050	RC Decade Combined device with integrated R and C Decade for the experimental identification of resistance and capacity values. Discharge circuit: push-button with changeover switch and discharge resistance 10 kOhm.	

Technical Data:

Range of resistance:	1 Ohm to 999,999 kOhm in steps of 1 Ohm
Precision:	= ± 1% above 40 Ohm = ± 4% from 40 Ohm to 13 Ohm = ± 6% from 12 Ohm to 3 Ohm = ± 10% with 2 Ohm and 1 Ohm
Load capacity:	max. 1W
Voltage:	max. 250 V (50 Hz)
Capacity range:	100 pF to 9,9999 µF in steps of 100 pF
Precision:	= ± 2 % aber 1 nF = ± 10 % from 1 nF to 100 pF

Energy and auxiliary devices / miscellaneous

Note: Installation height: 113 mm

Continuity tester, visible and audible

Reference No.	Design	28 TE
A12.060	Continuity tester, visible and audible visible by a green luminous field for low ohmic resistances, audible through a loudspeaker for high ohmic resistances	

Technical Data:

Connection:	2 pcs. 4 mm safety laboratory sockets for the visible test 2 pcs. 4 mm safety laboratory sockets for the audible test
Electric strength:	up to approx. 400 V AC with an audible continuity test
Test voltage:	approx. 24 V with a visible continuity test

Soldering station 80 Watt with digital display

Reference No.	Design	42 TE
A13.060	Soldering station 80 Watt with digital display Scope of supply inclusive soldering pencil WSP 80 and holder WPH for WSP 80	

Technical Data:

- electronic control electronics
- temperature ranges 50°C to 450° C, adjustable by means of keys
- 3-digit digital display for actual value and set point
- tolerance $\pm 2\%$ of the final value
- automatic tool recognition
- external input device (WCB 1/WCB 2, optional) can be connected for time and locking position
- potential equalisation (initial state hard-earthed)

Loop wiring fields

Reference No.	Design	14 TE
A11.011	Loop wiring fields - 6 pcs. 4 mm safety laboratory sockets with 6,3 mm flat socket for connection to loop wirings, non-wired	

Reference No.	Design	21 TE
A11.060	Loop wiring fields - 6 pcs. 4 mm safety laboratory sockets with 6,3 mm flat socket for connection to loop wirings, non-wired - 3 pcs. BNC sockets, non-wired

The 19" device systems highlab® and basic

Table of contents 19" device systems highlab® and basic

	Seite		Seite
System explanation		Power output stages	159
Dimensions, integration	86 ff.	Function generators 1 MHz inclusive counter, excellent harmonic factor (discretely mounted)	160
Mains modules		Telecontrollable software highlink® Power and LabVIEW device drive	
Single-phase safety and switching units	89	For regulating power packs, function generators, digital multi-meters, variable isolating transformers AC, oscilloscopes, and more	48 ff.
Three-phase safety and switching units	89 ff.	Measuring devices	
Emergency stop module	91	Digital multi-meters (telecontrollable)	161 ff.
Room sub-distribution and table controls	92	Resistance measuring devices	165
Main power supply modules	93	Power measuring devices (telecontrollable)	165 ff.
Individual release module with motor protection switches	94	Hameg modular series (telecontrollable)	168 ff.
Individual release modules with automatic fuses (single-phase power supply)	95	Oscilloscopes (telecontrollable)	172 ff.
Individual release modules with automatic fuses (three-phase power supply)	96	Pneumatic units	
Control modules for retractable and swivel tables	97	Central room compressed air supply units	174
Fixed alternating current voltage supplies, single-phase		Constant compressed air supply units	175 ff.
Socket modules – not unearthed	98 ff.	Adjustable compressed air supply units	177 ff.
Alternating current voltage modules – unearthed	101 ff.	Vacuum gauges	179
Small alternating current voltage modules – unearthed	104	Pressure measuring and calibrating devices	180 ff.
Fixed alternating current voltage supplies, single-phase and three-phase		Energy and auxiliary devices	
Three-phase current and socket modules – not unearthed	105 ff.	Testing, soldering and unsoldering, loading	
Three-phase current and socket modules – unearthed (single-phase)	109 ff.	Rotating field indicator	182
Small three-phase current modules – unearthed	111	Continuity tester	182
Variable alternating current voltage supplies, single-phase		NF testers	183
Variable transformers, unearthed and non-unearthed	112 ff.	Thermometers	183
Variable transformers, unearthed, inclusive connectable rectifier	115 ff.	Soldering and unsoldering stations	184 ff.
Variable transformers, unearthed, inclusive connectable rectifier and 2nd transformer winding	117 ff.	Load resistances	186 ff.
Variable transformers, unearthed, inclusive externally connectable rectifier	119 ff.	Voltage and power source	187
Regulating transformers, unearthed, single-phase AC stabiliser, (telecontrollable)	121 ff.	Electronic loads	188
All-rounder AC / DC power supply	123	Decades, Logades, simulators	
Variable three-phase supplies		R-Decades	189
Three-phase variable transformers, unearthed and non-unearthed	124 ff.	C-Decades	189
Three-phase variable transformers, non-unearthed, inclusive connectable rectifier	127	RC-Decades	190
Variable three-phase transformers, unearthed, inclusive connectable rectifier	128	RC-Logades	190
Variable regulating transformers, three-phase, AC stabiliser, (telecontrollable)	129	L-Logades	191
Test facility power supply modules	130 ff.	Pt 100 simulators	191 ff.
Three-phase bridge rectifier and pole changing switch	134 ff.	Selective pole and interface fields, auxiliary devices, empty plates etc.	
Motor test system 120 kW	136 ff.	Selective pole fields	193
Frequency inverter		Interface fields	194
Three-phase frequency inverter	140	Testers for electric safety and function	
Fixed direct current voltage supplies		Manual / semi-automatic testers (telecontrollable)	
Fixed voltage sources, linear and cyclical	141 ff.	High-voltage testers	195, 196
Current and voltage sources (calibrating sources)	146	Insulation testers	195, 197 ff.
Variable direct current voltage supplies (DC stabiliser) (telecontrollable, Ethernet, USB, RS232)		Earth conductor testers	195, 199 ff.
Single regulating power packs up to 90 Watt	147, 148	Leakage current testers	195, 201
Single regulating power packs up to 300 Watt	147, 149	Safety testers (device tester) as per VDE 0701/0702	202
Single regulating power packs up to 600 Watt	147, 150 ff.	Cable testers	203
Single regulating power packs up to 1500 Watt	147, 156	Interturn fault testers	204
Double regulating power packs up to 2 x 90 Watt	147, 153 ff.	Accessories for erfi testers	
Double regulating power packs up to 2 x 180 Watt	147, 156	Testing tools	205
Function generators (telecontrollable, Ethernet, USB, RS232)		Testing software Candy	206 ff.
Function generators 10 and 20 MHz resp. inclusive counter	157 ff.	Testing hoods, testing rooms and testing chambers	208 ff.
Interfaces for function generators (Ethernet, USB, RS232)	158 ff.	Accessories 19" technique	
		Empty plates, empty cassettes	211
		3 HE adaptor	212
		Module racks / mains bus system	213 ff.
		Expansion parts for racks	216
		19" casing / portables	217

19" Rack technique: equipment variants

Table attachment or device cockpit resp. 6HE for the 19 inch device systems highlab and basic with an internal 19 inch holding mechanism for the integration of 19 inch partial racks.

The 19 inch device systems highlab and basic Modular design of the complete system

Devices of the most different functions and for the most different fields of application of the standardized 19 inch system allow the individual configuration of the devices.

The complexity, volume, performance data and type of the device are specified by the user. A great variety of various modules are available. The fields of application are varied just the same: Research, development, manufacturing, test shop, maintenance, service and training.

19 inch module dimensions

The classification of the rack technique is based on 19 inch full racks, partial racks, sub-racks and adapters of 6HE and 3HE partial racks. Depending on the space required for the function of the device concerned, full racks and partial racks are offered as 3HE or 6HE rack. However, different modules of the same function are also deliverable as 6HE as well as 3HE rack (see device concerned). Full racks conform to DIN 41494 page 1 and are designed as either 3HE or 6HE devices. Partial racks conform to DIN 41494 volume 5. The standardized width of 14 partial racks allows an optimal combination within the sub-rack.

Widths of the devices: 14, 28, 42, 56, 70, 84TE as well as 19 inch

Height of the device: 3HE and 6HE

Definition 19 inch, HE and TE

19 inch: This is the width of a full rack of the theoretical dimensions of 482,6 mm.

HE: A height unit is defined with 44,45 mm. Thus, the theoretical dimension of 3HE = 133,35 mm and of 6HE = 266,5 mm.

TE: A sub-unit = 2/10 inch = 5,08 mm. 14 TE thus conform to theoretical 71,12 mm.

Information regarding the representation of the devices in this catalogue:

The 19" partial and full racks are always represented in this catalogue with a lateral or top device shielding. These shieldings are not included in the standard scope of supply. On request, they are deliverable as an option.

19" Rack technique: equipment variants

Table attachment and device cockpit 6HE resp. for the 19 inch device systems highlab and basic with an internal 19 inch holding mechanism for the integration of 19 inch partial racks on the left and two 19 inch full racks on the right.

Cassette design

Racks and empty cassettes are supplied in the standard version without shielding.

On request, cassettes for the protection against accidental contact can be provided with an all-round metal shielding. The upper and lower shieldings are equipped with airing perforations.

19" Rack technique: equipment variants

Equipment variant for 19 inch partial racks

Equipment variant for 19 inch full racks

Equipment variant: on the left for 19 inch partial racks and on the right for 2 x 19 inch full racks

Equipment variants

Depending on the work required, different designs are available: The equipment is divided in three groups which in turn can be combined:

1. Holders for 19 inch partial racks
2. Holders for 19 inch full racks
3. Open shelves

Combinations of full racks with partial racks as well as with open shelves can be realised.

The completion of the device system by the insert plate programme act is possible at any time.

Module flexibility

For the combination of full and partial racks as well as of partial racks with different height units, the 19 inch system offers ideal conditions:

- 19 inch sub-racks for integrating partial racks in 19 inch holders of attachments and cockpits et.
- 3 HE adapter for integrating 3HE partial racks in holder for 6HE partial racks.

System wiring

The necessary distributor is provided for a standard equipment and can be extended, if required. Partial racks are powered by standardized rack connectors conforming to DIN 41612 design H15. For full racks and insert plates there is a flexible connection system available which allows also the easy integration of special devices.

Technical Data:

(applicable to all models)

Design size: Optionally 3 HE / 42 TE, 6 HE / 28 TE or 6 HE / 14 TE

Operating elements: Motor protection switch: 10-16 with built-in undervoltage release
 NFI switch: leakage current 30 mA, nominal current 25 A type A pulsed current sensitive
 Emergency stop push-button: with additional potential-free contact for the room emergency stop.
 Key-operated on-off switch: Option (see selection chart above)

Phase display: Phase pilot lamp

Options: AC/DC sensitive NFI switch type B

Reference No.	Design
Z 01.100	Additional price for NFI switch type B (AC/DC sensitive) Suitable for smooth direct-currents, obligatory for the fuse protection of classrooms as per DIN VDE 0100-723:2005-06

Safety and switch units

By means of a key-operated switch these mains modules allow the separate release of low voltages and alternating current voltages and three-

phase supplies respectively.

Durch eine integrierte Fangschaltung kann die Person ermittelt werden, die den Not-Aus-Taster betätigt hat.

Room sub-distribution and table controls for training centres

For the professional equipment of classrooms and laboratories, nowadays the instructor places are, as a rule, equipped with room sub-distributions and table controls. This allows to professionally make safe complete rooms and to control individual student working places.

The standardized 19" modules for room sub-division and table control are integrated in a space-saving way in a 19" floor unit at the instructor working place.

Example of an instructor working place with room sub-distribution in a 19" floor unit

19" floor unit equipped with the following components:

Example:

- 1.) **Control module with up/down push-button**
to control the retractable table of the student (up/down control)
- 2.) **Main power supply module**
for the central release of the room
(network supply)
- 3.) **Individual release module**
for the separate release of individual student tables

Telecontrol with radio actuator for retractable and swivel tables with additional functions

Telecontrol

Reference No.	Design
Z 01.105	Telecontrol for max. 24 retractable or swivel tables resp., other functions
Z 01.106	Receiver (radio actuator) built- into the table attachments

Technical Data:

Use:	The telecontrol contributes considerably to the functionality of the room. 3 groups of 8 tables each can be controlled. For example, 1 push-button can be programmed for several actuators (receivers). Thus, groups can be controlled quickly and efficiently.
Advantages:	No cabling necessary High flexibility due to a simple programming of the allocation of the push-buttons. Additional functions such as separate release of low voltage and three-phase voltage, light, sun-blinds etc. easily realisable

Receiver (actuators)

Reference No.	Design
Z 01.106	1 radio actuator (receiver)

The radio actuators allow the control of the following functions:

- 1.)) Up / down movement of the retractable / swivel tables
- 2.) Switching of different devise groups in the student tables
e.g. (low voltage, mains voltage, measuring devices etc.)

E 12.513	6 HE / 14 TE 2, 4, 6, 8, 10, 12 V AC / 10 A

Fig.: H 92.721

Fig.: E 12.511

Technical Data:

(applicable to all models)

Design size:	6 HE / 14 TE
Output voltages:	for model H 92.721 and E 12.511 resp.: 6, 12, 18, 24, 36, 42 V AC / 3 A (unearthed) for model H 92.723 and E 12.513 resp.: 2, 4, 6, 8, 10, 12 V AC / 10A (unearthed)
Fuse protection:	3 x thermal magnetic protective switch
Mains switch	

Three-phase current modules – not unearthed

Device system highlab

Reference No.	Design
H 14.016	3 HE / 28 TE

Device system basic

Reference No.	Design
E 13.016	3 HE / 28 TE

Technical Data:

(applicable to all models)

Design size: 3 HE / 28 TE

Outputs: 1 CEE socket 400 / 230 V max. 16 A per phase

Three-phase current modules – not unearthed – star-delta connection – with safety laboratory sockets L1, L2, L3, N and PE

Device system highlab

Technical Data:

(applicable to all models)

Design size: 3 HE / 28 TE optionally 6 HE / 28 TE

Outputs: 1 CEE socket 400 / 230 V max 16 A per phase
5 safety laboratory sockets 400 / 230 V max. 16 A per phase
1 key-operated on-push-button
1 off-push-button
For models H14.525 and E13.525 resp.: in addition with 2 Schuko sockets

Phase display: 3 phase pilot lamps

Three-phase current and socket modules – not unearthed, with voltage and current meter, star-delta connection

Device system highlab

Reference No.	Design
H 16.524	6 HE / 42 TE

Device system basic

Reference No.	Design
B 14.525	6 HE / 42 TE

Technical Data:

(applicable to all models)

Design size:	6 HE / 42 TE
Output voltages:	3 x 400 / 230 V, 50Hz, max. 6 A per phase, not unearthed
Outputs:	1 CEE socket 5 safety laboratory sockets (L1, L2, L3, N und PE) 1 Schuko socket
Displays:	voltage: moving iron instrument 0-400 V, class 1,5 current: moving iron instrument 0-6 A, class 1,5
Voltmeter reversible:	for switchover of the voltage display between the phases or between the phases and the neutral conductor
Ammeter reversible:	for switching on the ammeter in each phase
Fuse protection:	3 thermal magnetic automatic fuses
Phase control:	phase pilot lamps
Mains switch	

Note: Sockets of foreign make see page 63

Three-phase current and socket modules – not unearthed, with 1 voltage meter and 3 current meters , star-delta connection

Device system highlab

Device system basic

Reference No.	Design
H 99.517	6 HE / 84 TE

Reference No.	Design
B 97.517	6 HE / 84 TE

Technical Data:

(applicable to all models)

Design size:	6 HE / 84 TE
Output voltages:	3 x 400 / 230 V, 50Hz, max. 16 A per phase, not unearthed
Outputs:	1 CEE socket 8 safety laboratory sockets (L1 or U1, L2 or V1, L3 or W1, U2, V2, W2, N and PE) 2 Schuko sockets 3 safety laboratory sockets L1, N and PE
Displays:	voltage: moving iron instrument 0-400 V, class 1,5 current: 3 moving iron instruments 0-15 A with overload scale, class 1,5
Voltmeter reversible:	for switchover of the voltage display between the phases or between the phases and the neutral conductor
Changeover switch:	for switchover between star and delta connection
Phase control:	phase pilot lamps
Mains switch	

Note: Sockets of foreign make see page 63

Three-phase current and socket modules – unearthed (single-phase), 230 V / 690 VA and 1150 VA resp.

Device system highlab

Technical Data:

(applicable to all models)

Design size: 6 HE / 42 TE

Output voltages: 3 x 400 / 230 V, 50Hz, max. 16 A per phase, not unearthed
1 x 230 V, 50 Hz, max. 3 A alternatively 5 A, unearthed

Outputs: 1 Schuko socket without grounding contact through transformer for supplying unearthing alternating current voltage 230 V / 690 VA alternatively 1150 VA
4 Schuko sockets, not unearthed
1 CEE socket, not unearthed
5 safety laboratory sockets (L1, L2, L3, N and PE), unearthed

Fuse protection: isolating transformer through thermal magnetic protective switch

Mains switch

Three-phase current and socket modules – unearthed (single-phase 230 V / 500 VA and three-phase 400 V / 1 kVA)

Device system highlab

Reference No.	Design
N 96.612	6 HE / 19"

Device system basic

Reference No.	Design
C 96.612	6 HE / 19"

Technical Data:

(applicable to all models)

Design size:	6 HE / 19"
Outputs:	1 Schuko socket without grounding contact through isolating transformer for supplying unearthed alternating current voltage max. 500 VA 1 CEE socket through isolating transformer for extracting unearthed three-phase voltage max. 1 kVA
Fuse protection:	primary: isolating transformer through thermal protective switch secondary: 1 automatic fuse 1 pole, 16 A B for Schuko socket 1 automatic fuse 3 pole, 16 A B for CEE socket
Mains switch:	1 mains switch for Schuko socket 1 mains switch for CEE socket

Note: Sockets of foreign make see page 63

Low three-phase voltage modules – unearthed – star-delta connection

All-rounder AC / DC power supply, for integration in 19" rack V 16.301

Device system highlab

Device system basic

Reference No.	Design
H 56.517	12 HE / 42 TE

Reference No.	Design
E 54.517	12 HE / 42 TE

Technical Data:

Suitable for integration in the 19" rack V 16.301 of the furniture series varantec

Design size: 12 HE / 42 TE

Function block safety and switch units:

Operating elements:	motor protection switch:	10-16 A with built-in undervoltage release
	NFI switch:	leakage current 30 mA, nominal current 25 A type B (AC/DC sensitive)
	emergency stop push-button:	with additional potential-free contact for room emergency stop
	key-operated changeover switch:	with 3 key positions for changeover between - low voltage - zero voltage (off) - low voltage, alternating current voltage and three-phase voltage

Phase display:	phase pilot lamps for L1, L2 and L3 pilot lamp for low voltage
----------------	---

3 Schuko sockets
5 safety laboratory sockets L1, L2, L3, N and PE

Function block variable transformers:

Outputs:	4 safety laboratory sockets: for supply of DC and AC voltage o - 260 V / 3 A AC or o - 260 V / 3 A DC (not unearthed)
	2 safety laboratory sockets: for supplying fixed DC voltage 230 V / 2 A (unearthed)
	2 safety laboratory sockets: for supplying mains AC voltage 230 V (not unearthed)
	4 safety laboratory sockets: for supplying DC and AC voltage o - 25 V / 10 A AC or o - 25 V / 10 A DC (unearthed)
	1 Schutzleitererdungsbuchse

Fuse protection:	primary: microfuse
	secondary: 3 x thermal magnetic automatic fuse

Three-phase variable transformers – not unearthed and unearthed, installation height 3 HE

Device system highlab

Fig.: H 97.012

Device system basic

Fig.: B 96.012

Technical Data:

(applicable to all models)

Design size:	3 HE / 70 TE
Outputs:	5 safety laboratory sockets L1, L2, L3, N and PE for not unearthed models 4 safety laboratory sockets L1, L2, L3 and N for unearthed models
Output data:	3 x 0 – 400 V / 230 V 50 Hz, max. 3 A per phase not unearthed and earthed resp. (depending on model) alternatively: 3 x 0 – 450 V / 260 V 50 Hz, max. 2 A per phase not unearthed
Displays:	analog display for U and I 2 iron movement instruments class 1,5
Voltmeter switch:	for switchover of the voltage indication between the phases or between the phases and the neutral conductor
Ammeter switch:	for activating the current indication to the various phases with 4 switch positions: L1, L2, L3 and zero
Fuse protection:	primary: 3 x thermal automatic fuse secondary: 3 x thermal magnetic automatic fuse
Switch-on current:	limitation by the automatic activator
Phase display:	3 phase pilot lamps

**LabVIEW device driver
free download
www.erfi.de/software**

***Explanation to the multifunctional display**

The multifunctional display can show the following measured values:

Voltage	U : L1 - N (V) / L _x - N (V) / L _x - L _x (V)
Current	I (A)
Active power	P (W)
Idle power	Q (VA _i)
Apparent power	S (VA)
Power factor	cos phi (0,10 i .. 1 .. 0,10 c)
Frequency	f (L1-N : 48-62 Hz)

The interfaces allow the control of the AC sources.
Besides the complete device control, the erfi software highlink Power takes also over the room control by means of Ethernet interface.

Test facility power supply module

Technical explanation / function description (applicable to all devices)

Test facility power supply modules have been developed for repair placed and test facilities. To use the power supply modules for test facilities correctly, motorised three-phase variable transformers must be connected.

The modules are suitable for single-phase and three-phase ultimate consumers and test items.

They are switched on and off by a motor protection switch with under-voltage release and an adjustable excess-current protection of 32 – 40 A. As output there is a CEE socket, a Schuko socket and eight screw-type terminals.

Through the screw-type terminals a three-phase current test item can be operated with a star or delta connection and optionally with anti-clockwise or clockwise rotating field.

The switchover is done by means of a star-delta-reversing switch. For the indication of voltage and current, a voltmeter and six resp. three ammeters are built-in (depending on model). The voltmeter can be integrated between the individual phases or between any phase and neutral conductor.

Through a further reversing switch the ammeters can be switched on in different current paths. In connection with a motorised three-phase variable transformer, the output voltage of 0-400 / 230 V is infinitely variable. The variable transformer is operated by two push-buttons for a higher or lower voltage. For phase control there are three phase pilot lamps each at the input and output.

The devices and their connected components are protected by several triple and one-way automatic fuses.

The additionally integrated continuity tester for connections of high and low resistance contributes to more functionality of the modules.

Test facility power supply module with 3 current ranges, installation height 6 HE

Device system highlab

Reference No. : H 19.504

Device system basic

Reference No. : E 18.914

Technical Data:

(applicable to all models)

Design size:	6 HE / 140 TE
Contactors:	motor protection switch 32-40 A with undervoltage release
Fuse protection:	2 triple automatic fuses, 2 one-way automatic fuses
Outputs:	1 CEE socket 32 A – 6 h, 8 screw-type terminals, 1 Schuko socket
Output data:	3 x 400 / 230 V 50 Hz, max. 40 A per phase, not unearthed, unstabilised 3 x 0 – 400 / 230 V 50 Hz, max. 40 A per phase, not unearthed, infinitely variable, unstabilised, only in connection with an external variable transformer with motor drive 3 current ranges: 2 A / 10 A and 40 A, switchable
Displays:	voltage 1: 1 moving iron instrument 0-400 V, class 1,5 current: 3 moving iron instruments with overload scale 0-40 / 120 A, class 1,5 current: 3 moving iron instruments with double scale 0-2 / 0-10 A, class 1,5
Voltmeter changeover switch:	for switchover of the voltage indication between the phases or between the phases and the neutral conductor
Changeover switch 1:	star-delta reversing switch with null position
Changeover switch 2:	from mains operation to transformer operation
Switch-on current:	limitation by automatic activator in transformer operation
Phase display:	3 phase pilot lamps for mains input, 3 phase pilot lamps for output
Continuity test:	high resistance: with 230 V AC, display by a 230 V glow lamp low resistance: with 24 V AC, display by a 24 V glow lamp
Input:	by series terminals

Three-phase variable transformers for test facility power supply modules

Three-phase variable transformer with motor drive to be used in connection with power supply modules.

The device supplies three-phase alternating voltage from 0-400 V and a maximum current of 25 and 40 A resp. It is very well suited for three-phase test items and three-phase consumers with a high input power.

Operation and control are effected by two push-buttons at the power supply modules.

Reference No.	Design
E 18.91 A	three-phase variable transformer 25 A, 17,3 kVA
E 18.91 B	three-phase variable transformer 40 A, 27,6 kVA

Technical Data:

(applicable to all models)

Design size:	450 x 900 x 450 mm (width x depth x height)
Outputs:	connection through inside connecting terminals
Output data:	voltage: 3 x 400 / 50 Hz, max. 25 A or 40 A resp. per phase, depending on model
Regulating time:	0 – 400 V approx. 4 seconds
Fuse protection outputs:	3 neozed-elements
Mains supply:	3 x 400 V / 50 Hz (stressable neutral conductor or PEN required) motor drive: 230 V / 50 Hz connection: through inside connecting terminals fuse protection: none, has to be ensured by the user
Protection class:	1
Relative humidity:	60 %
Working temperature:	40 °C
Weight:	25 A three-phase current variable transformer: approx. 73 kg 40 A three-phase current variable transformer: approx. 90 kg

Available options for three-phase variable transformer:

Reference No.	Design
E 18.91 C	voltage stabilisation unit
E 18.91 D	switch-on current limitation 25 A
E 18.91 E	switch-on current limitation 40 A

Technical Data for E18.91 C: voltage stabilisation unit for three-phase variable transformer

Manipulating speed:	approx. 100 V/s
Regulating speed:	+/-2 % of the final value (other values on request)
Integration:	in the casing of the variable transformer

Technical Data for E18.91 D and E18.91 E: switch-on current limitation for 25 A / 40 A

Function:	avoids the release of the pre-fuses when switching-on the transformer
Integration:	in the casing of the variable transformer, will be looped into the feed line

Device system basic

Reference No.	Design
B 14.534	pole changing switch 40 A

Technical Data:

(applicable to all models)

Design size:	6 HE / 42 TE
Pole changing switch:	tapped winding 40 A
Connection:	1 CEE socket, 5 pole, 32 A 6 screw-type terminals 63 A with 4 mm possible plugging 1U, 1V, 1W, 2U, 2V, 2W 1 earth conductor safety laboratory socket

The pole changing switch is connected to the test facility power supply module.

erfi - Working place for motor testing inclusive motor testing system 120 kW and 120 kW three-phase current supply

The working place allows extensive tests of electric motors, transformers as well as of all thinkable electric machines and consumers. The centre-piece of the working place is

the high current module E19.611 and the 120 kW three-phase transformer. The high current module is integrated in the left-hand side of the 19"/9 HE attachment and is connected to the 120 kW three-phase transformer.

Reference No.	Design
AP 10.100	erfi working place for motor testing as per illustration inclusive all insert devices

Reference No.	Design
AP 10.101	three-phase current supply 120 kW

erfi working place for motor testing

Technical description:

The test working place consists mainly of the following components:

- Laboratory table of the series ABZ with suspended storage unit
- 19" table attachment
- High current module E19.611
- 3 and 6 HE / 19" racks:
 - alternating current and three-phase current supplies
 - DC double regulating power supply
 - DC fixed voltage
 - interturn fault tester
 - mΩ-meter
 - high voltage tester
 - speed-indicator
 - VDE 0701 / 0702 –tester
 - digital multimeter

Three-phase current supply 120 kW

Technical description:

Three-phase variable transformer with economy winding as per VDE 0552 for hindered operation as per § 5.

The transformer is installed next to the working place and by means of flexible cables it is connected to the high current module E19.611, integrated in the 19" attachment of the working place.

Technical Data:	
Output data:	output 1: three-phase 0 – 133 / 230 V output 2: three-phase 0 – 260 / 450 V output 3: three-phase 0 – 400 / 690 V
Current consumption:	100 A, max. 150 A
Motor drive:	setting time approx. 10 to 80 sec. current time controller through 10 channel potentiometer at the test working place
Mains supply:	3 x 400 V / 50 Hz Connection: through inside connecting terminals
Protection class:	IP 40
Working temperature:	40 °C
Cooling:	(AN) self-cooling air
Design size:	1200 x 800 x 2100 mm (width x depth x height)
Casing:	2 pcs. 19" cabinets with sheet steel door at the front
Weight:	approx. 1600 kg

High current module E19.611

Technical Data:	
Mains connection:	three-phase to a labelled strip terminal
Fuse protection:	motor protection switch with undervoltage release, thermal release condition infinitely variable from 160 to 200 A single or triple automatic fuse for all control circuits
Main switch:	through motor protection switch
Emergency stop push-button:	with additional potential-free contact for room emergency stop
Displays:	3 three-phase pulsed current flow meters (144 x 144 mm) with meter type rectifier and linear double scale 1,5 / 5 A
Current ranges:	1,5 A, 5 A, 15 A, 50 A, 100 A (150 A)
Voltage ranges:	output 1: 3 AC 0 – 133 / 230 V output 2: 3 AC 0 – 260 / 450 V output 3: 3 AC 0 – 400 / 690 V
Outputs:	1 Schuko socket 1 CEE socket 3 pole, 16 A, blue 3 CEE sockets 5 pole, 16, 32 and 63 A, red 8 high current winged terminals 100 A with 4 mm possible plugging, arranged like a terminal board 1 star-delta reversing switch 100 A with null position
DC supply:	output 1: 0 – 150 V / 100 A output 2: 0 – 300 V / 100 A output 3: 0 – 450 V / 100 A residual ripple: approx. 18 % above Si DB rectifier
Rectifier:	The rectifier is a separate rack with active air cooling. Design size: 6 HE / 42 TE, included in the scope of supply of the high current module E19.611.
DS voltage display:	moving coil voltage meter (144 x 144 mm), switchable double scale 100 V / 500 V
DC current display:	moving coil ammeter (144 x 144 mm), switchable double scale 10 A / 100 A
Fuse protection:	internal SILIZED fuse 100 A
DC output:	2 high current winged terminals 100 A with 4 mm possible plugging
Power measuring device:	multifunctional, with mains analysis, processor-controlled, 3 independent digital displays function: see following page
Dimensions:	853 x 529 mm (width x height)

Further technical data:

Advantages

- Mains and consumption analysis by measuring the harmonics, THD (total harmonic distortion), imbalance, extreme and average values
- 4-digit, 14 mm high LED display, allowing a safe and afar reading particularly in dark rooms
- User-programmable display

Features

- Precise measured values: U, I: 0,2 %, P, Q, S, PF, counter: 0,5 % F: 0.02 Hz
- Quadrant measurement of all factors in the alternating current network
- Retrofit extension modules with RS 232/485 interface, demand set memory, MODBUS, synchronous input, analog output, Ethernet or Profibus-DP
- Safe galvanic 3-way separation between all circuits
- 2 pulse or limit value outputs
- 4 counters for active energy: delivery/discharge with high rate and low rate tariff*
- 4 counter for neutral energy: inductive/capacitive or delivery/discharge with high rate and low rate tariff*
- Protection of all counter readings, records and adjustments in case of auxiliary energy failure
- Connection modes: single-phase 3L equal/unequal load (Aron, full), 4-L equal/unequal load (Open-Y, full)

Examples of orders for motor testing place AP10.100:

Item	Ref.No.	Short description	Catalogue	Page
1	04.1.2011	Laboratory working place furniture series ABZ Size: 2000x1000x 780mm (widthxdepthxheight) not conductive, completely welded design inclusive steel frame reinforcement	ABZ	12
2	04.3.3065.1	Suspended unit of furniture series ABZ 1 material pullout, 4 steel drawers, completely organizable	ABZ	16
3	V14.203H.1	19"/9HE table attachment Size: 2000x360x449 mm (widthxheightxdepth)	varantec	58

Recommended additional equipment / devices

(Detailed technical description earth conductor and isolation tester see from page 195)

Reference No. B85.013 Earth conductor tester (page 200)

Digital telecontrollable earth conductor tester 10 / 25 A
With serial interface, telecontrollable by erfi testing software Candy,
limit value programming, measured value logging, fully automatic
measuring range changeover up to 0.3 Ω .

Accessories:

Reference No.	Designation
TS 8.004	Earth conductor test bar with integrated start
TS 8.005	Earth conductor test tongs

Reference No. B83.013 isolation tester (page 198)

Digital telecontrollable isolation tester 500 V / 1000 V switchable, up to
G Ω , with serial interface, telecontrollable by erfi testing software Candy,
limit value programming, measured value logging, fully automatic
measuring range changeover up to 1 G Ω .

Accessories

Reference No.	Designation
TS 8.004	Test tip with integrated start
TS 8.005	Laboratory cable with test tip without start
TS 9.004	Testing software Candy (for HS, ISO and PE testing)

Note: The testing software Candy controls the isolation and earth conductor tester. 1 licence is sufficient.

Frequency inverter – unearthed, three-phase for three-phase motors up to 1,38 kVA

The modern electronic erfi frequency inverter family is based on the latest equipment technology. The frequency inverters allow the voltage

supply of a certain frequency. All inverters are parameterized by the supplier.

Applications: Control of three-phase motors

Sinus filter: A large factory-installed integrated sinus filter avoids transient emissions to the motor supply lines. A low limit frequency guarantees minor transient emissions. Therefore, an excellent total harmonic factor of less than 5 % with currents of higher than 0,75 A is achieved.

Fixed frequency: 400 Hz

Output: 200 V phase-to-phase, 115 V phase to zero / 4 A / unearthed

Device system highlab

Reference No.	Design
N 96.951	6 HE / 19"

Device system basic

Reference No.	Design
C 96.951	6 HE / 19"

Technical Data:

(applicable to all models)

Design size: 6 HE / 19"

Outputs: 4 safety laboratory sockets, switchable to 1 CEE socket for supplying unearthed three-phase voltage

Output voltage: 3 x 115 phase-zero / 3 x 200 V phase-phase, unearthed

Output nominal current: 4 A

Output power: 1,38 kVA

Output fixed frequency 400 Hz

Displays: 4 moving iron instruments class 1,5
 - 1 analog display for voltage 0 – 300 V
 - 3 analog displays for current 0 – 4 A per phase
 digital frequency display, 3-digit

Voltmeter reverser: for changeover of the voltage display between the phases or between the phases and the neutral conductor

Error display: with LED display

Fuse protection: three-phase automatic fuse for primary and secondary side

Phase display: 3 phase pilot lamps

Serially integrated sinus filter :

Large sinus filter: ex works already serially integrated and wired to the output
 The sinus filter avoids transient emissions to the motor supply lines.
 The filter has a low limit frequency and thus guarantees a good EMV compatibility.

Total harmonic factor: Due to the high-quality sinus filter: smaller than 5 % with output currents of higher than 0,75 A.

Note / information / know-how:

The frequency inverter is so dimensioned that the starting behaviour with a motor of up to 1380 VA is guaranteed.

The integrated frequency inverter has a clearly higher output power. The output data are necessarily reduced due to the starting behaviour. Due to the integrated sinus filter no shielded motor cables are required.

The quality of the output signal of the indicated total harmonic factor of lower than 5 % is achieved because of the output filter.

Total weight inclusive sinus filter: 13 kg

Fixed voltage sources – lengthwise controlled

The new μ -processor-controlled regulating power pack generation highlab and basic

Due to the innovative processor technology the new erfi regulating power packs possess an unequalled degree of functionality. This functionality is subject to a utility model. German utility model No. 20 2004 004 623

Technical highlights:

- Plug-and-play function in connection with the innovative control software highlink Power
- Integrated ramp generator for long-term tests
- Chart function by means of ramp generator
- Many programmable parameters for a flexible control
- All models are optionally telecontrollable (Ethernet, USB 2.0, RS232 C)
- Optional interface on the front or back
- Easy handling due to simple block commands in ASCII format

- All voltage and current values are continuously measured and transferred to the interface
- Manual and tele-controlled operation
- Precision regulator, switchable in series and in parallel
- All parts of the power pack from 45 Watt with step pre-control (depending on the respective output voltage, minimization of the thermal losses)

Technical Data for the power range of up to 120 and 600 Watt resp. (lengthwise controlled power packs)

		up to 120 Watt	up to 600 Watt
Partial and full racks of 19" technology			
Control deviation 1 with load change 0-100 %	voltage	2 mV/A	0,2 mV/A
	current	0,2 mA/V	0,2 mA/V
Control deviation 2 with mains change 10 %	voltage	< 0,01 %	< 0,01 %
	current	< 0,01 %	< 0,01 %
Temperature coefficient	voltage	0,005 %/K	0,007 %/K
	current	0,013 %/K	0,02 %/K
Residual ripple	voltage	0,2 mVeff	0,5 mVeff
	current	0,5 mAeff	5 mAeff
Transient time with step change in load from 0-100 %		15 μ s	20 μ s
Transient time with step change in load from 100-0 %		500 μ s	1 ms
Ambient temperature		0 - 40° C	0 - 40° C

Technical Data for the power range higher than 600 Watt (synchronised power packs)

Modern secondary regulators of a high degree of efficiency, low transient emissions and low heat development.

Racks of 19" technology	Width 84 TE, height 6 HE
Input voltage	4 x 400/230 V \pm 10 %
Input frequency	48-62 Hz
Superposed alternating current voltage at the output	< 30 mVeff, < 100 mVss
Transient time	< 0,5 ms
Load control time with step change in load of 0-100 %	< 0,1 s
Temperature coefficient of the output voltage	< 150 ppm/V
Ambient temperature	0-40° C

Rear interfaces (option)

Reference No.	Interface
NWT 1.106	Ethernet
NWT 1.107	USB 2.0
NWT 1.108	RS 232 C

The interfaces allow the control of the power packs. Besides the complete device control, the erfi software highlink Power takes also over the room control by means of Ethernet interface.

Options:

Order no	Function	
PR 1.100	Preset Function:	The output can be switched on or off (OUTPUT-OFF/ON). If it is switched off max. current is displayed and can be changed. The circuit must not be manually disconnected from power supply. An important advantage!
OP 1.100	Arbitrary Function:	Realization of arbitrary- and standard waveforms such as sine, square, triangle, sawtooth. 100 points, just transferred via interface in internal memory and can be accessed with the Software highlink power or buy using a simple block programming on your own. Frequency up to 500 Hz at ohmic load. The unit operates directly from the data points from internal memory and enabling the functions of arbitrary waveform generators with high electrical power outputs. By this way, for example Car ignition pulses are simulated. Note: Please use the option " rear interface (remote control) " (see below)
OP 1.101	Comfortpackage:	includes the following 3 positions: <ul style="list-style-type: none"> • Seriell-/Parallel-Mode: The 2 Outputs are internally switchable between serial or parallel. This can either double the voltage or twice the current take. Functions individually activated by a button • Master- Slave-Mode: coupling of both outputs. Slave channel (right channel) follows the master channel (left channel). Both channels are galvanically separated. Function can be activated • Tracking-Mode: The removal of negative and positive voltage. Range -30 ... 0 ... +30 V Function can be activated by a button

Tip to remote control:

The device contains the latest microcontroller technology and can be controlled remotely via USB or Ethernet interface. Here, the device controls the remote control mode 2 different ways of working, in which the user can switch:

a) Remote control modus 1: (fully automatic)

In this mode the device exclusive follows the commands of the software highlink power. The device does not respond to manual intervention by the user on the device itself.

b) Remote control modus 2: (semi automatic)

In this mode the device follows on the one hand the commands of the software highlink and on the other hand, the users are given the opportunity, through the control dial to intervene and change the values manually by himself. The respective values are immediately transmitted to the interface and using the software displays high power link.

The universal tester is also available in the teaching tool format DIN A4.
fig.: D 06.001

I/O-Multiplexer/Matrix, digital and analog

Ideally suited for automated processes in industry and education
(for all basic tests and further tests of electronics as well as the digital and analog technology)

Device system highlab

fig. H 16.301

The device has 8 digital inputs, 8 digital outputs as well as 2 analog inputs (0 – 10 V and 0 – 20 mA) and 2 analog outputs (0 – 10 V and 0 – 20 mA). The built-in Ethernet interface allows in connection with the innovative control software highlink power the remote control of all outputs and all inputs.

Complex testing and automated test sequences are easy to handle. It can by way of example measuring device or power supplies switched to

Device system basic

fig. E 14.301

different switching points. All inputs and outputs are connected with 4 mm safety laboratory bushings.

Special feature:

The digital outputs have built-in switching relays with a breaking capacity of 260 V / 2 A. The relays are completely wired to 4 mm laboratory bushings.

Applications:

Analog electronic: read in of analog signals (0- 10 V, 0 – 20 mA)
output of analog signals (0- 10 V, 0 – 20 mA)

Digital electronic: read in of switching states
design and programming of logical circuits

Sensoric: inputs and outputs process of sensors

Control technology: control of digital actuators and pneumatic components

Measurement: switching devices in a variety of different measuring points
processing of analog input signals

Technical Data:

size:	3 HU / 56 DU
digital inputs:	8 digital inputs 24 V
digital outputs:	8 digital outputs with switching power 260 V / 2 A, floating
analog input 1:	0-10 V
analog input 2:	0-20 mA
analog output 1:	0-10 V
analog output 2:	0-20 mA
interface:	Ethernet

Advice for remote control:

The device contains the latest microcontrol technology and can fully remote controlled with the Ethernet interface.

Telecontrollable function generators with back-measurement function and integrated counter

erfi are the pioneer in the field of electronic laboratory equipment and were the first company in the year 2002 to introduce telecontrollable and networked laboratory instruments which, with the help of the innovative software highlink, revolutionized the complete market. The entirely newly developed function generator family offers excellent parameters and an excellent functionality such as tele-control by means

of the most modern software, large frequency ranges up to 20 MHz, amplitudes of up to 30 V_{ss} and frequency counters of up to 100 MHz. This new device generation satisfies all imaginable demands. Multilingual menu guidance in connection with the elegant shaft encoder and the new Comand function keys emphasize the superiority of this device class.

- Telecontrollable by means of Ethernet, USB2.0, TS232-C-interface (options)
- Extensive control software highlink Power (option, page 48 ff) or LabVIEW device driver (option page 54)
- Innovative menu guidance by a modern graphic display in blue colour
- Comand function keys for the fast access to the main functions
- Elegant shaft encoder for the easy-to-operate menu guidance
- Outstanding frequency range up to 20 MHz
- 8-digit frequency counter up to 100 MHz

The new graphic display in vacuum fluorescent technology allows an excellent reading even at a distance of 3 m, independently of the reading angle. The display is in blue and has a very high image sharpness and brilliance.

Technical Data:	
Display:	graphic display in vacuum fluorescent technology, blue
Menu language:	reversible German / English
Operating concept:	elegant shaft encoder with pressure function as well as Comand function keys for the optimal handling
Functions:	Sinus, triangle, rectangle, saw tooth, ramp operation, amplifier, DC, single current pulse, variable pulse duty factor
Operating modes:	free-wheeling, externally wobblable, (Sweep operation), PWM operation
Frequency range:	0,1 Hz -20 MHz for models H 38.035 and H 38.037 0,1 Hz -10 MHz for models H 38.036 and H 38.038
Amplitudes:	0-20 V _{ss} for models H 38.035 and H 38.037 0-30V _{ss} for models H 38.036 and H 38.038
Amplifier:	approx. 20 dB amplification, DC
Single current pulse:	variable, positive current pulse released by a key, adjustable current pulse length
Outputs:	20 V _{ss} idling for models H 38.035 and H 38.037 30 V _{ss} idling for models H 38.036 and H 38.038 5 V TTL-compatible, 50 Ω-output impedance
Inputs:	external, internal PWM In, VCO IN, attenuator: 0-30 dB continuously, additionally 20 dB and 40 dB to be activated through the same bushing
DC offset:	-10 V to +10 V, 0 V with push-button
Wobble operation, external:	
VCO input:	0-5 V control voltage input for frequency change of max. 1:1000
Wobble operation, internal: Sweep operation, start and stop frequency, wobble frequency: max. 100 Hz in steps of 1 Hz	
PWM operation:	
Control input:	-2,5V to +2,5V control voltage input for pulse-pause operation
Frequency counter:	
Measuring range:	0,1 Hz to 30 MHz for models H 38.035 and H 38.036 0,1 Hz to 100 MHz for models H 38.037 and H 38.038
Input:	external, BNC bushing
Input voltage:	0,5 V _{eff} to 100 V _{eff}
Display:	2 x 16 characters

Tele-control operation for function generators (options)

Due to the optionally available interfaces (Ethernet, USB2.0 and RS232-C) the new function generators have become all-rounders. The tele-control allows the programming of the function generators and the integrated counters. This functionality makes it possible to use the new function generator family for automated measuring and regulating operations.

The telecontrollable function generators have been developed for the industrial use as well as for didactic training. They are an ideal and up-to-date tool for today's requirements, allowing many valuable functions.

The optionally available software highlink Power and "LabVIEW device driver" resp. facilitate the easy access to the device.

The following parameters are programmable by means of the optional interfaces (Ethernet, USB2.0 or RS232 within the respective limits:

- Selection of operating mode: free-wheeling, externally wobblable, internally wobblable (Sweep operation, PWM-operation)
- Functions/wave form: Sinus, triangle, rectangle, saw tooth, ramp operation, rectifier, DC, single current pulse, variable pulse duty factor
- Frequency: 0-20 MHz and 0-10 MHz resp.
- Amplitude: 0-20 V_{ss} or 0-30 V_{ss}
- DC offset: -10 V to +10 V
- Attenuator: 0-30 dB, 20 dB and 40 dB
- Sweep parameter: start and stop frequency wobble frequency
- Counter frequency: can be read out

Selection chart for device series highlab and basic

Reference No. System highlab	Reference No. System basic	Size	Design
H 38.035	B 35.035	3 HE / 56 TE	0,1 Hz – 20 MHz, 20 V _{ss} , counter up to 30 MHz

Rear interfaces (option)

Reference No.	Interface
NWT 1.106	Ethernet
NWT 1.107	USB 2.0
NWT 1.108	RS 232 C

Note:

Front interfaces see page 55.

The interfaces allow the control of the function generators. In addition to the complete device control, erfi software highlink Power takes also over the room control by means of Ethernet interface.

Power amplifier with amplifier input, 25 W_{eff} and 40 W_{eff} resp.

The modern power amplifier allows a wider use of the function generator family. Coils and test circuits of a high power input can be operated according to the scope of the power amplifier.

The power amplifier is directly connected to the function generator, allowing the modular use of the same. Also for training equipment this power amplifier is often integrated in the instructor's table. The loop

wiring systems installed in the room can be ideally supplied. The trainee gets the pre-specified signal on the training place. The power amplifier is deliverable with 25 and 40 Watt.

Output voltage:	max. 40 V _{SS}
Range:	DC up to 100 kHz – 0,3 dB idle running and with nominal load
Input:	BNC-connection
Output:	BNC connection, unearthed 2 safety laboratory sockets
Output resistance:	approx. 50 mΩ with 20 kHz approx. 330 mΩ from 20 to 100 kHz
Displays:	LED display for overload
Excess temperature:	temperature surveillance
External voltage protection:	through Triac and fuse
Short-circuit proof:	yes (with an extended short-circuit, response of the excess temperature protection)
L and C load:	switching on and off is possible without problem
Transient time:	approx. 750 ns
Input impedance:	approx. 50 kΩ and 180 pF
Input protection:	230 V _{eff}

Compact function generators for the high-end range with integrated counter and integrated power amplifier

The compact function generator series are characterised by their modular design and their excellent signal waveform. 3 different models of this generator class are available.

The first stage (models B34.011 and H36.011 resp.) is frequently integrated in training places.

The second stage offers a frequency display as well as an integrated counter.

The third stage allows in the same design size the 40 W power amplifier which is described in the previous page.

Device system highlab

Fig.: B 34.011 (stage 1)

Fig.: H 36.031 (stage 3 inclusive counter and power amplifier)

Fig.: B 34.013 (stage 3 inclusive counter and power amplifier)

Function generators – stage 1 (H36.011 and B34.011):

Design size:	3 HE / 42 TE
Functions:	sinus, triangle, rectangle, tooth saw
Operation modes:	free-wheeling, externally wobblable
Frequency range:	0,1 Hz – 1 MHz
Total harmonic factor:	< 0,5 % up to 50 kHz, < 1 % up to 100 kHz, < 3 % up to 1 MHz
Outputs (BNC):	20 V _{ss} /50 Ω, -20dB/50 Ω, TTL/50 Ω
VCO input:	5 V control voltage input for frequency changes 1:2 up to 1:100

Function generators – stage 2 (H36.021 and B34.012):

Technical data identical with stage 1, however, in addition:

Functions:	single current pulse and variable pulse duty factor
Frequency counter:	0,1 Hz up to 1 MHz for internal signals 5 Hz up to 10 MHz for external signals
Inputs:	counter input for external signals

Function generators – stage 3 (H36.031 and B34.013):

Technical data identical with stage 2, however, in addition:

Power amplifier:	40 W _{eff} continuous power with sinus on 5 Ω 80 W peak power with rectangle on 5 Ω
Output voltage:	max. 40 V _{ss}

Digital multi-meter 4 ½ -digit

Device system highlab

Fig.: H 34.033

Fig.: H 34.515

Device system basic

Fig.: B 33.012

Fig.: B 33.515

4 1/2- digit digital multi-meter with free area selection, 5 different types of measurement are available for DC voltage, AC voltage, DC current, AC current and resistance with totally 28 measuring ranges. When measuring the AC voltage and the AC current, the real effective value is dis-

played. The measuring kind as well as the measuring range are selected by a key bank. Among other things, the device is characterized by the fact that currents of up to 10 A can be measured.

Technical Data:

(applicable to all models)

Design size: 3 HE / 35 TE and 6 HE / 35 TE resp.

Measuring types/measuring ranges:

DC voltage: 0,2 V, 2 V, 20 V, 200 V, 1000 V

AC voltage: 0,2 V, 2 V, 20 V, 200 V, 1000 V

Three-phase voltage: 0,2 mA, 2 mA, 20 mA, 200 mA, 2 A, 20 A

DC current: 0,2 mA, 2 mA, 20 mA, 200 mA, 2 A, 20 A

AC voltage: 200 Ω, 2 kΩ, 20 kΩ, 200 kΩ, 2000 kΩ, 20 MΩ

Resistance: 10 MΩ/70 pF in all voltage measuring ranges

Input resistance: approx. 250 mV for the area end with all current measuring ranges

Voltage drop: in the Ohm range max. 2 V at the item to be measured

Measuring voltage: digital 4 1/2-digit, LED with 10 mm high characters

Display: <+/- (0,05 % of average value+0,01% of actual value) for DC voltage
 <+/- (0,2 % of average value+0,01% of actual value) for DC voltage outside the 20 A range
 <+/- (0,7 % of average value+0,01% of actual value) for DC voltage within the 20 A range
 <+/- (0,1 % of average value+0,01% of actual value+50 MΩ) for resistance
 <+/- (0,5 % of average value+0,07% of actual value) 40 Hz ... 10kHz for three-phase voltage within the range of 0,2 V, 2 V, 20 V
 <+/- (1,0 % of average value+0,07% of actual value) 20Hz ... 500 Hz for three-phase voltage within the range of 200 V, 2000 V
 <+/- (1,0 % of average value+0,07% of actual value) 40 Hz ... 400 Hz for three-phase current within the range of 2 A, 20 A

Basic precision: 0,05 % within the range of 0-40°C

AC interfacing: real effective value crest factor >3

Connection: 4 pcs. safety laboratory sockets

The basic precision of 0,012 % and various special functions of this multi-meter meet all requirements asked for by nowadays modern measurement technology. Real effective measurement 20 Hz – 100 kHz (AC, AC + DC), 2/4 wire resistance measurement, dBm-measurement, data-hold function, diode continuity test – all these functions show the versatile use of this multi-meter. In addition the device is equipped with a sorting function with adjustable limits as well as with a storage mode for recording the minimum and maximum values.

Multi-functional power measuring device three-phase, 500 V / 16 A

Device system highlab

Fig.: N 33-503

Device system basic

Fig.: C 33-501

- Measurement of current, voltage, active power, idle power and apparent power power factor, active energy and reactive power, total harmonic factor and harmonic components
- Precise measured values with error limits 0,25 % for U and I
- Communication-compatible
- Current inputs galvanically separated
- Two limit values with any measured value allocation
- Good readability by high-contrast LED displays, 14 mm high

Display of energy:

For displaying the energy there are eight energy counters integrated in the device which indicate the following energy values

- Active energy for the conductors 1, 2 and 3 as well as for the complete system
- Reactive power for the conductors 1, 2 and 3 as well as for the complete system

Harmonics analysis:

With the 32 averaged samples per signal and mains period a harmonics analysis is carried out approx. once per second. The FFT (fast Fourier transformation) supplies the harmonics up to the 15th harmonic. This is the basis for calculating the effective values of the fundamental (HD 1) and the individual harmonic waves (HD 2 ... 15) as well as the total distortion (THD). With the phase currents these effective values are indicated and with the phase voltages the total harmonic factor (effective values referring to the effective value of the complete signal). Since the power measurement instrument has no special anti-aliasing filter, existing distortions of higher than 17th order can influence the measurement result of the higher harmonic.

Multi-functional power measuring device three-phase, 500 V / 5 A

Device system highlab

Fig.: H 38.515

- Measurement of current, voltage, active power, idle power and apparent power, active energy and reactive energy, neutral current, power factor and frequency
- Precise measured values for U, I < 0,5 %, F < 0,02 Hz, remaining 1 %
- 4 counters for active energy: supply/delivery with high-rate and low-rate tariff
- 4 counters for idle energy: inductive/capacitive with high-rate and low-rate tariff
- 5 average values each of active, idle and apparent power with programmable interval period
- Two So-outputs for pulse or limit value outputs
- Transducer conditions programmable
- 5 freely programmable intervals

Device system basic

Fig.: B 35.512

- Flexible auxiliary energy supply by AC/DC far range power packs
- Retrofit extension modules:
 - data logger
 - for 2 analog outputs
 - for 2 MB data memories, real time clock and Ethernet
- minimum-maximum value storage
- measurement in single-phase mains, three-wire and four-wire networks in 4-quadrant operation. The electric network can extensively be evaluated in all 4 quadrants.

Hameg modular system 8000 – inclusive current supply module

Device system highlab

Fig.: H 46.013

Device system basic

Fig.: B 44.013

Due to a relevant basic unit (recording cassette with power supply) the integration of the Hameg modular device series 8000 has been made possible.

Design 1: With programmable power pack (flexible concept)

A programmable power pack allows the installation of all models in each position. The power pack automatically recognises the inserted Hameg device and supplies always the right voltage. The programmable power pack is even designed for the triple power pack HM8040-3 which has the highest power input. Due to the necessary capacity, only 2 models maximum can be integrated in a 6 HE rack with this variant. Installation height: 3 HE / 42 TE (for 1 Hameg device)
Installation height: 6 HE / 42 TE (for 2 Hameg devices)

Technical data of the programmable power pack:
 2 x 8 V AC loadable with 0,5 A each
 2 x 5 V DC loadable with 1 A each
 4 x 20 V DC loadable with 0,5 A each
 Voltage values between 5 V and 20 V programmable (any polarity)
 Available power: for 2 modules max. 36 Watt

Design 2: With fixed voltage supply (fixed concept)

This economic design is adapted to the respective device type. For this purpose the devices are allocated to a fixed installation position and are only provided with the necessary voltage supply. A later modification is, therefore, not possible with this variant because the integrated voltage supply is not programmable. The relevant voltage supply is integrated in the basic unit and wired accordingly for the installation position. Design size: 3 HE / 42 TE (for 1 Hameg device)
Design size: 6 He / 42 TE (for 2, optionally 3 Hameg devices)

Hameg modular system 8000

10 MHz function generator

Fig.: HM 8030-6

Technical Data:

Kind of range

Sinus, rectangle, triangle, pulse; free-wheeling, internally or externally frequency modulated, with or without DC offset

Frequency range

0,05 Hz up to 10 MHz in 8 decadal steps variable: x 0,09 to x 1,1 (12:1)

FM input

(VCF, BNC socket on the back of the device)

Frequency change: approx. 1:100

Input voltage: max. ± 30 V

Internal wobble

Wobble speed: 20 ms to 15 s

Wobble stroke: approx. 1:100

Outputs: short-circuit proof, separate fixed voltage strength up to $\pm 45 V_{DC}$ (30 s)

Impedance: 50 Ω

Output voltage: 10 V_{SS} on 50 Ω load; idle running 20 V_{SS}

Voltage graduation: max. 60 dB

2 divisors: each 20 dB $\pm 0,2$ dB, variable: 0 bis 20 dB

Amplitude errors: (sinus / triangle)

0,5 Hz to 0,5 MHz: max. 0,2 dB

0,5 MHz to 10 MHz: max. 0,5 dB

DC offset: variable (to be switched on and off)

an 50 Ω load: max. $\pm 2,5$ V

In idle speed: max. ± 5 V

Trigger output: to the signal output synchronous rectangular signal +5 V/TTL

1,6 GHz universal counter

Fig.: HM 8021-4

Technical Data:

Measuring functions

Frequency A/C; time of oscillation A, occurrence counting A;

pulse width positive / negative (average value), occurrence counting A

Input characteristics

Frequency range: 0 – 150 MHz; ; input A
100 MHz – 1,6 GHz: ; input C

Frequency measurement: (input A)

LSD: $2,5 \times 10^{-7}$ s x frequency / measuring time

Resolution: \pm or 2 LSD

Measurement of time of oscillation

Range: 10000 sec to 66,6 ns

LSD: $2,5 \times 10^{-7}$ s x period/measuring time

Resolution: ± 1 or 2 LSD

Occurrence counting (manual / external control)

Range: DC to 20 MHz

Min. pulse duration: 25 ns

LSD: ± 1 occurrence

Digital storage oscilloscope up to 200 MHz TDS 1000B / 2000B series

Device system highlab

Fig.: Basic unit H38.511 with oscilloscope TDS 2012 B

Device system basic

Fig.: Basic unit B36.511 with oscilloscope TDS 2024 B

The digital storage oscilloscopes of the series TDS 1000B and TDS 2000B offer a combination of superior power potential and easy handling at a favourable price.

Note for ordering:
 1. Please choose the desired basic unit (6 HE / 70 TE cassette)
 2. Please choose the desired oscilloscope for the basic unit
 Of course, the oscilloscopes are also deliverable without basic unit as stand-alone device.

General description:

Central compressed air regulation for release and adjustment of the compressed air supply to the connected working places or compressed air connections. A special feature of this device is the high through flow

volume of 4600 l/min. which allows to supply a complete room with several working places.

Technical Data:

(applicable to all models)

Design size:	3 HE / 56 TE
Input pressure:	max. 16 bar
Input:	on the back for a hose of 9 mm inside diameter, the fed in compressed air must be filtered, oil-free and free of condensation water.
Output pressure:	0,5 to 10 bar continuously adjustable, pressure reducer with fine adjustment and relief pressure valve, nominal through flow 4600 l/min. (with 8 bar pre-pressure, 6 bar output pressure and 2 bar pressure drop)
Output:	with the models H78.011 and E75.011 resp: 1 coupling socket DN 5, self-stopping for variable compressed air withdrawal with the models H78.013 and E75.013 resp: 1 coupling socket DN 5, self-stopping for fixed compressed air withdrawal 2 coupling sockets DN 5, self-stopping for variable compressed air withdrawal
Display:	manometer 0-10 bar, class 1,6 as per DIN, nominal size 63 mm

Compressed air output, not adjustable

Measurement device and display

Reference No.	Design
H 76.511	6 HE / 42 TE

Reference No.	Design
B 74.511	6 HE / 42 TE

The modern pressure measurement and calibration device convinces by its versatility. With this device, the input pressure can be adjusted by means of a precision pressure controller. Needle valves allow the precise pressure adjustment. Functions are available on the display for leakage rate, min./max. values and for storing the measured values.

With the data logging function, the measured values can be filed in an integrated data storage and from there, can be recorded directly through a connected printer by the RS232 interface. A software under Windows is optionally available. The measurement device allows measurements in the field of overpressure and vacuum, differential pressure and absolute pressure.

Technical Data:

(applicable to all models)

Design size:	6 HE / 42 TE	
Input pressure:	max. 17 bar	
Input:	on the back for a hose of 6 mm inside diameter	
Output pressure:	0 to 17 bar, continuously adjustable, by precision pressure relief valve	
Output:	2 coupling sockets DN 5, self-stopping	
Measuring media:	instrument air, inert gas and all media which are compatible with stainless steel 18/8 (DIN 1.4305)	
Unit of measurement:	mbar, bar, kPa, hPa, Mpa, mmH ₂ O, mH ₂ O, mmHg, psi, inH ₂ O, inHg	
Measuring range:	0 to 17 bar	
Temperature calibration:	10 to 35 °C	
Measuring rate:	class 0,2 %:	20 measurements/second
	class 0,1 % / 0,05 %:	10 measurements/second
Storing intervals:	manually 1 to 60 seconds / minutes, selectable	
Needle valve / Variobalg:	function needle valve 1:	admit input pressure: for filling the system lock input pressure: for leakage test
	function needle valve 2:	fine pressure reduction: pressure can be precisely regulated in the filled up system
	function Variobalg:	fine pressure increase: device has an integrated Variobalg, allowing the precise pressure regulation

Reference No.	Design
E 74.515	6 HE / 42 TE

The modern pressure measurement convinces by its extensive measurement technology.

It is a pure measurement device.

The pressures to be measured (vacuum and overpressures) are fed in on the front. As with the previous models, functions for leakage rate, min./max. values and for the storage of measured values are available on the

display. The measured values can be filed in an integrated data storage and from there, can be recorded directly through a connected printer by the RS232 interface.

A software under Windows is optionally available.

The measurement device allows measurements in the field of overpressure and vacuum, differential pressure and absolute pressure.

Technical Data:

(applicable to all models)

Design size:	6 HE / 42 TE	
Input pressure:	max. 17 bar	
Input / air supply:	on the front through 2 coupling sockets DN 5, self-stopping coupling socket 1 for overpressure (connection of a compressor) coupling socket 2 for vacuum (connection of a vacuum pump)	
Measuring media:	instrument air, inert gas and all media which are compatible with stainless steel 18/8 (DIN 1.4305)	
Unit of measurement:	mbar, bar, kPa, hPa, Mpa, mmH ₂ O, mH ₂ O, mmHg, psi, inH ₂ O, inHg	
Measuring range:	0 to 17 bar	
Temperature calibration:	10 to 35 °C

H 18.041 3 HE / 56 TE

The new multi-functional soldering/unsoldering station is perfectly adapted to professional repair works of the individual production engineering as well as for repair shops, development departments and laboratories.

Technical Data:

Design size:	3 HE / 56 TE
Channels:	2 independent channels with automatic tool recognition for the simultaneous use of 2 soldering tools
Temperature range:	soldering and unsoldering: 50 – 450° C hot air: 50 – 550° C
Temperature stability:	+/- 5° C
Display:	LCD display
Pump:	built-in rotary disc pump for producing vacuum and air through flow vacuum 0,7 bar and hot air 1 – 10 litre/min.
ECO operation:	ECO key, for temperature reset to the customer's programmed work units
Programmable:	freely programmable key for repeated functions
Control:	digital control electronics, indication by LED
ESD:	ESD safe
Tools:	Powerful soldering tools such as the new high-power soldering rod WP 200 with 200 Watt or the 100 Watt hot air tool HAP 1 can be connected without any problems.

Device system basic

Reference No. Design

B 15.041 3 HE / 56 TE

Included in the scope of delivery:

Weller soldering rod set 80 Watt

Soldering rod for unleaded soldering

consisting of:
1 soldering rod WP 80 and safety tray with 4-step inclination adjustment

Weller unsoldering rod set DCV 80 Watt

Unsoldering rod for horizontal operations in an angle of 45° with external tin collecting tank for quick changeover. Suction nozzles with eccentric fastening for quick changeover, consisting of:
1 unsoldering rod DSX 80 safety rack and cleaning set for suction nozzles

Weller soldering fume exhaust with speed regulator and exhaust arm, funnel, hose and table clamp

Reference No. Z 01.600

Technical Data:

Speed regulation:	through cable remote control for max. 2 working places
Filter:	built-in fine dust filter H 12 with active carbon foam for clean breathing air
Exhaust arm:	with funnel for easy table installation by table clamps and hose plug-in system
Power:	175 VA
Max. vacuum:	2000 Pa
Delivery volume:	120m ³ /h
Noise level:	< 50 dbA, low-noise turbine for a quiet working place
Dimensions:	320 x 320 x 395 mm (length x width x height)

Scope of delivery:

Soldering fume exhaust with exhaust arm and hose 60 mm diameter, length 1 m, funnel nozzle, throttle flap and table clamp set.

Description:
Intelligent electronic load for testing batteries, power packs etc. With the modern electronic load it is possible to carry out dynamic tests. Constant voltage, current, power, resistance, saw tooth, trapezoidal and rectangular

signals, adjustable wings and pulse-pause conditions, extremely quick control values, battery test mode, analog as well as optionally digital interface plug-in cards (RS232/CAN/USB) automate your tests and burn-in application in laboratory and test field.

Technical Data:

(applicable to all models)

Design size:	6 HE / 56 TE bzw. 3 HE / 19"	
Input voltages:	up to 400 V DC	
Currents:	up to 25 A	
DC power:	up to 400 W	
LCD display:	2 x 40 characters with all values (set/actual)	
4 Operating modes:	constant voltage (CV) constant current (CC) constant power (CP) constant resistance (CR)	
Trigger input:	for A and B operation (slew rate)	
Trigger output:	available	
Dynamic functions:	level:	2 adjustable load levels
	switch-on times:	adjustable 50 µs to 100 s
	slew rate:	adjustable 30 µs to 200 ms
	precision:	+/- 10 %
	trigger input:	external level changeover
	rise time/dropout time:	50 µs
Battery test function:	with cut-off when reaching a defined end-of-charge voltage mode:	current, power or resistance
	battery protection:	adjustable end-of-discharge voltage
	display:	expired time and consumed battery capacity
Interfaces:	analog interface as standard	
	control inputs:	0 to 10 V for U, I, P, R (0 to 100 % nominal value)
	monitor outputs:	0 to 10 V for U, I (0 to 100 % nominal value)
	control signals:	internal / external, input on / off resistance range 1 / 2 / internal / external, standby, R range 1 / 2
	status signal:	excess voltage or excess temperature
	outputs:	reference voltage 10 V
Further interfaces:	optional plug-in cards (retrofit): USB, RS232, CAN	
Connections:	load input:	on the front through safety terminals

The new Compact Tester Series

The new compact tester series from erfi is characterized by the high flexibility and modularity. Besides the high voltage and isolation tests, the leakage current test is now part of the concept.

The previous manual high voltage tester family has been extended and has generally been improved. The new HV testers are equipped with an integrated time control as well as with analog interfaces for logging the HV-sided secondary current. The isolation and protective conductor testers have been completely newly developed and have been equipped with a comprehensive direct intelligence. The microprocessor controlled devices have serial interfaces. Thus, all measured values can be further

processed with the erfi testing software Candy. Due to the modular design the components are made into complete VDE0113 / EN 60204 testers. On request, also USB2.0 and Ethernet interfaces can be integrate.

The new devise series are ideally suited for manufacturers of complete lines and of components for electronic and electric products, using switch cabinets. The devices are also predestined for the use in laboratories, testing fields, repair shops and training centres.

Overview – Technical Data for VDE0113 / EN60204 – Compact Testing System

High voltage testers (4 models)

Design size:	19"/3HE full-sized plug-in unit
High voltage test:	0-5 KV AC, alternatively 0-5 KV AC and 0-7 KV DC
Power:	500 VA power
Measuring range:	up to 120 mA
Testing time (time function):	1 to 99 sec (option)
Interfaces:	analog interface for current and voltage measured values (option)

Insulation testers (3 models)

Design size:	3 HE / 28 TE - partial plug-in unit
Insulation test:	500 V DC, alternatively 500 V DC / 1000 V DC reversible
Measuring range:	up to 500 MΩ up to 1 GΩ (option)
Testing time (time function):	1 to 99 sec. (option)
Interface:	RS232 interface (series) analog interface for current and voltage measured values (option)

Protective conductor testers (2 models)

Design size:	3 HE / 56 TE - partial plug-in unit
Protective conductor test:	10 / 25 A reversible and 0-25 A variable
Measuring range:	up to 500 mΩ
Testing time (time function):	1 to 99 sec. (option)
Interface:	RS232 interface (series) analog interface for current and voltage measured values (option)

Leakage current tester (1 model)

Design size:	3 HE / 56 TE - partial plug-in unit
Leakage current test:	for single-phase test items up to 10 A
Testing mode:	A and B, reversible
R/C combination:	reversible
Measuring range:	up to 5 mA

Tele-control with testing software Candy

All devices with a RS232 interface are telecontrollable. The modern testing software Candy (reference No. TS9.004) allows to parameterise and control the individual tests in succession. Thus, all testing plans and all measured values are stored and filed according to standards.

Min./max. limit values are adjustable and programmable for all tests. Potential-free contact outputs for GOOD and ERROR are available.

High voltage testers, manual

High voltage testers, telecontrollable, inclusive time control and analog interface for current and voltage

Device system highlab

Fig.: N 83.512

Device system basic

Fig.: C 83.012

Modern high voltage testers for testing the insulation strength of electric and electronic devices or lines according to the safety regulations presently in force. Ideally suited for the use in manual, semiautomatic or fully automatic testing systems.

Technical Data:

(applicable to all models)

Design size:	3 HE / 19 inch
Output voltage:	0 - 5 kV AC and 0 - 5 kV AC resp. and 0-7 kV DC, depending on model infinitely variable, unearthed, unstabilised
Display:	voltage analog instrument 0-5 kV AC and double scale 0-5 kV AC/0-7 kV DC current analog instrument 0-12 mA and 0-120 mA
Output power:	power of the HV transformer: 500 VA
Short circuit current:	> 200 mA from 400 V
Switch off current:	2 - 120 mA infinitely variable, peak value cut-out
Flashover message	visibly by a red lamp, audibly by a permanent alert or 10 s long alert
Burning out:	no cut-out of high voltage in case of flashover, for localising the place of the flashover
Switch status:	operational, ready switching on, in operation
HV switching on:	in voltage zero point
HV switching off:	in current zero point
Switch off time:	< 20 ms
Output:	on the front: through HV sockets with screw-type locking (on request also possible on the back) on the back: 1 potential-free changeover contact for flashover or error message
HV interruption:	primary, on rear plug-in connector for connection to forced opening switches
Connection possibilities:	foot-operated switch, two-hand operation and warning lamp through rear plug-in connector
Preselection of test time:	1-99 seconds in steps of 1 second (see selection chart time control)
Interfaces:	analog interface (0-10 V) to read out current and voltage values (see selection chart analog interface)

Insulation testers manual

Device system highlab

Reference No.: H 84.301

Device system basic

Reference No. : B 83.011

Modern insulation testers for testing the insulation resistance of electric and electronic devices or lines according to the safety regulations presently in force. Ideally suited for manual and quick measurements such as for repairs or small series.

Technical Data:

(applicable to all models)

Design size:	3 HE / 28 TE
Output voltage:	500 V +- 1% unearthed
Measuring range:	numbers 2, reversible range 1: 1 MΩ to 10 MΩ range 2: 10 MΩ to 100 MΩ
Display:	moving coil instrument 40 μA, class 1,5 with resistance scale range 1: 1 MΩ to 10 MΩ range 2: 10 MΩ to 100 MΩ
Short circuit current:	max. 12mA direct current
Short circuit time:	max. 15 s
Output:	on the front 2 safety laboratory sockets 4 mm
Voltage strength:	max. 600 V DC or AC resp. for max. 10 s

Selection chart for device series highlab and basic

Reference No. System highlab	Reference No. System basic	Design size	Output voltage
H 84.301	B 83.011	3 HE / 28 TE	500 V DC

Insulation testers telecontrollable, inclusive time control and interface for resistance measured values

Device system highlab

Fig.: H 84.303

Device system basic

Fig.: B 83.013

This newly developed insulation tester allows an easy-to-operate test of the insulation resistance, simultaneously logging the measured values. Limit values can be defined just as well as testing times. In connection

with the modern testing software, this device class can be perfectly well used in testing systems. An easily programmable instruction set allows also the use as OEM-product.

Technical Data:

(applicable to all models)

Design size:	3 HE / 56 TE
Measuring range:	numbers 2, reversible range 1: 0,4 MΩ to 20 MΩ range 2: 20 MΩ to 500 MΩ
Display:	digital, LED 3 1/2-digit, TRMS automatic measuring range switchover
Front output:	2 safety laboratory sockets 4 mm, 1 Schuko socket
Rear output:	GOOD contact (potential-free) ERROR contact (potential-free) contacting error (potential-free)
Front inputs:	start socket
Rear inputs:	start socket
Test voltage:	500 V DC, reversible to 1000 V DC (with models H83.303 and B83.013)
Test time:	1 – 99 seconds in steps of 1 second
Limit value surveillance:	by means of potentiometer, adjustable on the front. When falling below the adjusted limit value, there is a visible and audible error message
Interfaces:	RS232 interface (in series). The interface allows to read out the measured value.

- Note:**
- Control by erfi testing software Candy TS9.004
 - For connection of test items with different mains plugs, various connection adapters are available.

Fig.: H 88.103

Device system basic

Fig.: B 85.013

This newly developed protective conductor tester allows an easy-to-operate test of the protective conductor resistance, simultaneously logging the measured values. Limit values can be defined just as well as testing

times. In connection with the modern testing software, this device class can be perfectly well used in testing systems. An easily programmable instruction set allows also the use as OEM-product.

Technical Data:

(applicable to all models)

Design size:	3 HE / 56 TE
Measuring range:	numbers 2, reversible 10 A - range: 10 mΩ to 500 mΩ 25 A - range: 10 mΩ to 350 mΩ
Display:	digital, LED 3 1/2-digit, TRMS
Front output:	2 safety laboratory sockets 4 mm for sensor circuit 2 safety laboratory sockets 4 mm for high test currents 1 Schuko socket
Rear output:	GOOD contact (potential-free) ERROR contact (potential-free) I > I Nominal (potential-free)
Front inputs:	start socket
Rear inputs:	start socket
Test currents:	10 A, reversible to 25 A
Test voltage:	6 V / 12 V reversible
Test time:	1 - 99 seconds in steps of 1 second
Limit value surveillance:	by means of potentiometer, adjustable on the front. When falling below the adjusted limit value, there is a visible and audible error message
Interfaces:	RS232 interface (in series). The interface allows to read out the measured value.

Note:

- Control by erfi testing software Candy TS9.004
- For connection of test items with different mains plugs, various connection adapters are available.

Leakage current tester manual

Device system highlab

Fig.: H 88.121

Device system basic

Fig.: B 85.121

Modern leakage current tester for testing the leakage current of electric and electronic devices or lines according to the safety regulations in force. Ideally suited for manual and quick measurements for repairs or small series.

Technical Data:

(applicable to all models)

Design size:	3 HE / 56 TE
Type of test:	test type A and B reversible test type A: L1 against PE test type B: N against PE
Test:	for single-phase test items up to 10 A nominal current
Supply voltage:	externally through rubber connector (external isolating transformer)
Measuring range:	numbers 2, reversible range 1: 500 µA
Range 2:	5 mA
Display:	1 digital display 3 ½ -digit for leakage current
Measuring mode:	four-pole measurement
R/C combination:	reversible from R to R/C combination
Connection of test item:	Schuko socket reversible to test tip

Note:

For connection of test items with different mains plugs, various connection adapters are available.

H 88.121	B 85.121	3 HE / 56 TE	10 mA max. 10 A nominal current

Device tester VDE 0701 and VDE 0702

Device system highlab

Fig.: H 86.521

Due to the computer-aided design a manual as well as an automatic test sequence in the prescribed order is possible. The measurement of the protective conductor current is made according to the differential current procedure. The device is equipped with a plastic foil keyboard.

The display of the measured values is digital by a four-line LCD display. The entire adjustment and remote control of the device as well as logging of the tests is possible with a PC (Windows 7/98/ME/NT/2000) and the software supplied with it.

The programme allows the following functions:

- Transfer of the measured data from the device tester to the PC
- Management of customer and/or device data
- Sorting of data as per defined criteria (next test, customer, device type etc.)
- Edition and printout of individual or collective record

Technical Data:

Measuring and testing sequence as per VDE 0701

Protective conductor resistance measurement	0–1000 mΩ
Measuring range:	
Limit value as per DIN VDE 0701:	< 300 mΩ
Measuring current 0,2 A DC (automatic polarity reversal of the measuring current)	
Insulation resistance measurement	
Measuring range:	0,2–20 MΩ
Test voltage:	500 V DC
Short-circuit current:	4,9 mA
Limit value as per DIN VDE 0701:	device protection class 1: ≥ 1 MΩ device protection class 2: ≥ 2 MΩ
Substitute leakage current measurement	0–20 mA
Measuring range:	
Measuring voltage:	40 V AC
Limit value as per DIN VDE 0701:	for devices with heating resistance ≤ 3,5 kW: ≤ 3,5 mA for devices with heating resistance > 3,5 kW: ≤ 1 mA/kW

Device system basic

Fig.: B 84.521

Technical Data:

Measuring and testing sequence as per VDE 0702

Test step as per VDE 0702:	
Substitute leakage current measurement	0–20 mA
Measuring range:	
Measuring voltage:	40 V AC
Limit value as per DIN VDE 0701:	for devices with heating resistance ≤ 3,5 kW: ≤ 3,5 mA for devices with heating resistance > 3,5 kW: ≤ 1 mA/kW
Protective conductor resistance measurement	
Measuring range:	0–1000 mΩ
Limit value as per DIN VDE 0701:	< 300 mΩ
Measuring current 0,2 A DC (automatic polarity reversal of the measuring current)	
Measuring of the protective conductor current as per the differential current procedure	
With this measurement the device is operated with nominal voltage. Devices with 230 V nominal voltage (devices of protection class 1) and max. 16 A current draw can be connected to the test socket of the tester.	
Measuring range:	0–10 mA
Limit values:	= 3,5 mA (automatic polarity reversal of the measuring current)
Measuring of the touch-current (devices of protection class 2)	
Measurement with nominal voltage. Devices with 230 V nominal voltage and max. 16 A current draw can be connected to the test socket of the tester.	
Measuring range:	0–10 mA
Limit values:	≤ 0,5 mA (automatic polarity reversal of the measuring current)
Remark: The test item is operated with nominal voltage.

Cable test system

Device system highlab

Reference No. : N 86.521

The erfi cable test system is equipped with serial interfaces by the manufacturer to read out individual measured values. The device allows the safe testing of almost all types of cables in the single-phase and three-phase field.

Device system basic

Reference No. : C 86.521

The basis for it are the insulation and protective conductor testers of the latest generation. A connection field ensures the connection of the test item.

Technical Data:

Continuity test:

Integrated continuity testers (5 V / 5 A) for testing single conductors. For this purpose the continuity tester is scanned by means of a turn-switch. Error display by means of LED's.

Insulation test:

The test items is connected to the insulation tester (partial plug-in unit). The measured values can be read out on the digital display. All measured values are recorded by the Candy testing software.

Protective conductor test:

The test item is connected to the protective conductor tester (partial plug-in unit). The measured values can be read out on the digital display. All measured values are recorded by the Candy testing software.

Connection of test item:

The cable test system is serially equipped with the following connections:

- Schuko socket and Schuko coupling
- Schuko socket and CEE coupling 16 A
- Connection of low heat device
- 5 Safety laboratory sockets L1, L2, L3, N and PE for loose cable ends

Software Candy – Reference No. TS9.004

With candy the tester becomes an all-rounder!

- Management of test plans and of all measurement results
 - Statistics package
 - User password management included
- Further explanations see detailed description from page 206

Z 01.403	adapter 16 A CEE plug on 16 A Perilex coupling

Interturn fault tester

Device system highlab

Reference No.: H 36.124

The manual interturn fault tester allows the safe recognition of damage to the paint finish of the interturn insulation. By checking the turns later faults and failures of coiled material can be avoided.

The WPV (testing procedure of interturns) developed by erfi allows a quick GOOD/FAULT conclusion about the coiled material. The result is displayed visibly and audibly. The limit values are largely adjustable and thus allow a broadband use.

Device system basic

Reference No. : B 34.024

Due to the NF-method a faulty test item is safely recognised. The device is taken in operation with the help of a GOOD test item. For this, the voltage source is altered so that the analog indication instrument is at maximum.

Faulty products are an additional load on the source and the change of amplitude resulting herefrom becomes visible.

By additional coding switches the limit value can be chosen. When falling below the limit value, the device signals the error status visibly and audibly.

Technical Data:

Program- ming:	The digital potentiometer indicates the adjusted value. With another test item type only the coding switches have to be altered.
Measuring mode:	NF method (definite fault recognition)
Measurement vol- tage:	max. 300 V
Output current:	max. 3 mA
Output frequency:	500 Hz bis 5 kHz
Display:	output voltage: analog indication instrument
Pre-specified limit value:	by digital potentiometer
Start test:	by push-button on the front plate or 24 V relay for external start
Error message:	visible and audible display as well as potential-free contact for external control
Test item connec- tion:	2 safety laboratory sockets

Accessory kit for high voltage testers

1 Warning lamp kit as per DIN EN 50191

Indicates the operating status ready for operation and ready for switch-on.
Compulsory.

1 Pair of high voltage test guns

with pluggable high voltage plugs on the front, protected against pulling out.
Cable length 2 m

1 Foot-operated switch

to start the high voltage test in connection with the two high voltage test guns.
The high voltage is switch-on in zero crossing.

Reference No.	Design

Testing software Candy

Nowadays Candy is one of the most modern testing software packages in the field of test systems. Due to many innovations Candy is leading on the market.

With the testing software version TS9.004, the new semi-automatic models of the series highlab and basic can easily be programmed just like the high-end device series CANclass.

The basic menu:

In this basic menu the user can quickly branch the individual sub-menus.

Candy is divided in 4 main areas like the software for big lines:

- Test planning
- Test sequence
- Statistics
- Password control

This defines already the professional design and demand of this package!

All software areas are designed for touch-screen function. A comprehensive help function is also normal just like the optionally available multi-lingual version.

With candy you establish your desired test plan within a very short time and you obtain a professional documentation of all measurement results. The serial statistics functions allows a perfect overview of your measurement data.

The result is an all-over documentation for you and your customers. The retro-traceability required by ISO 9001 is thus ensured. Candy gives you the security which you need for meeting the product liability act.

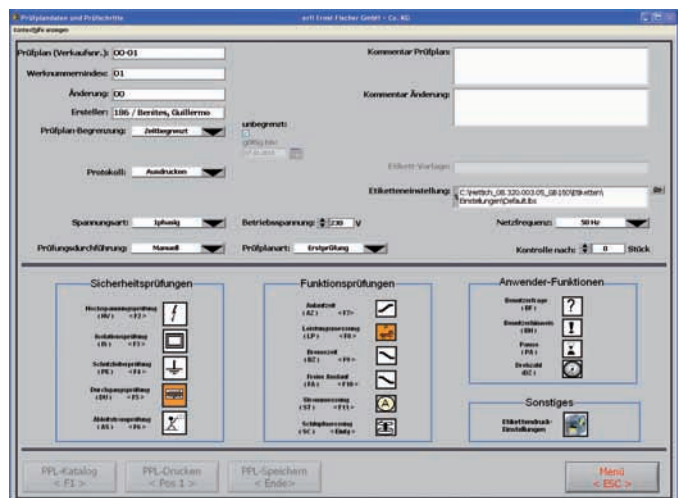

The test planning

Candy guarantees, in an unequalled way, an elegant and highly efficient test planning.

The sequence of individual partial tests for high voltage, insulation, protective conductor, leakage current and function tests can be altered during the test planning.

In addition Candy accepts freely formulated user questions and user details in which image files can be integrated.

The parameters of the different safety and function tests are determined in the partial test plans.

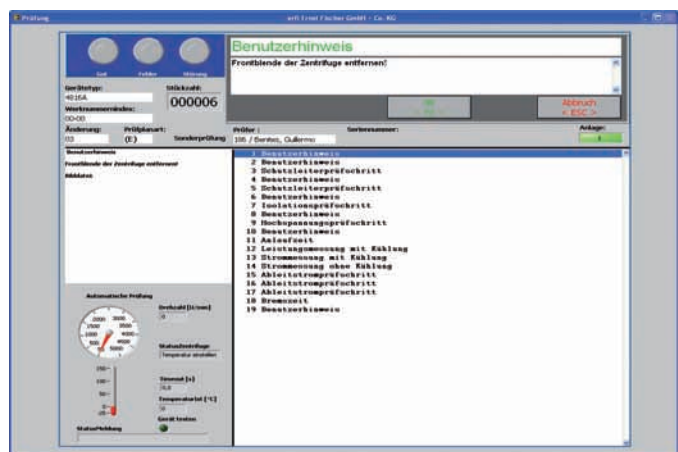

The test procedure

Candy informs the user about the present status of the test and the measurement results at any time.

The relevant test parameters appear on the left half of the screen. The actual measured values are visualised accordingly. Candy ensures the fully automatic evaluation.

The user is informed about the result and the actions to be taken at any time!

Reference No.	Design
TS 9.004	Testing software Candy

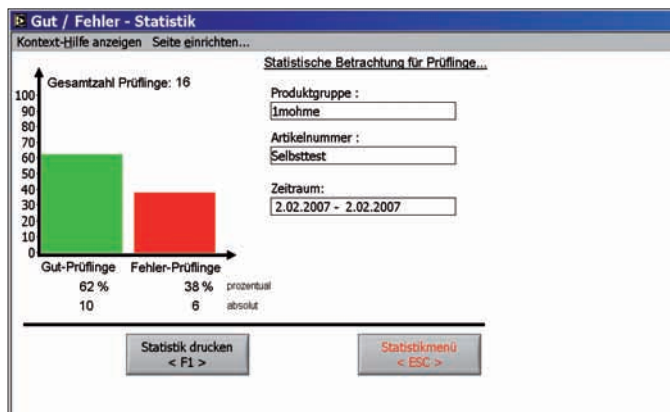

Testing software Candy

Testing software Candy

At the push of a button the GOOD/ERROR analysis permits a quick overview of quality and kind of error.

The implemented search criteria function of Candy allows the immediate localisation of each result of each test item, each order or each series and of each article.

The results of the measured values can directly be sent off by e-mail and there is no need to overwork them.

The detail analysis

With the statistic package it is possible to start a detail analysis. Then all faulty test items become immediately transparent.

At the push of a button all errors and weak points of the product are made clear with respect to electric safety and function tests. The intelligent data management of Candy allows a quick processing and visualisation of the measured values results.

The data can be managed by Candy in almost every desired form.

- XML
- SQL
- d Base
- Excel
- and other are available on request.

The password management

The module password management guarantees the safe handling of sensitive measurement data and test plan data.

First of all, all users are established.

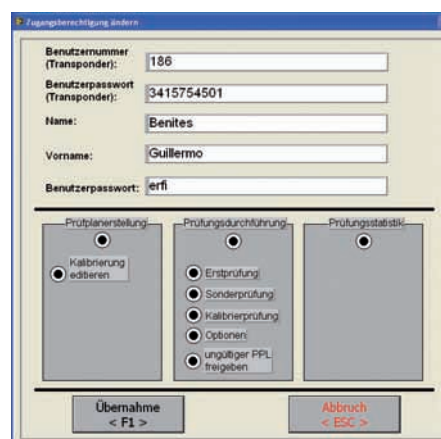

The programme package test planning, test sequence and statistics can be assigned to the user.

For example, it is possible to allow the quality manager access to all modules.

The material tester in the production will only be allowed access to the first test.

The test planning and statistics will then be locked for this user.

Candy permits a flexible control and thus secures your sensitive measurement data.

Test hoods

Test hood model 1

Technical description:

This model is characterised by its low space requirements and its extremely high robustness.

Small to medium-sized test items can be tested touch-proof under a swivel-mounted Makrolon hood.

Integrated safety switches guarantee the safe cut-out of high voltage. Start connection points as well as all other contacting connections are either on the side or alternatively on the rear side.

A double back wall equipped with a sufficient number of plug-in contacts ensure the flexible connection of the test item as well as the integration of small switchover units such as a high voltage matrix. An exchangeable base plate included in the scope of delivery allows to quickly change the adaption of the test item.

The photograph shows an example with a customer-specific test item holder made of high voltage resistant Delrin, allowing to place in 4 strip conductors each, extrusion-coated with plastics, for the automotive industry.

Outside dimensions:

600 x 550 x 260 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

480 mm wide, diameter of hood 405 mm

Reference No. Design

TS 10.010 Test hood model 1

Test hood model 2

Technical description:

The model 2 offers sufficient space for most of the test items. Also with this model the double rear wall and the exchangeable base plate are serially included in the scope of delivery.

A Makrolon hood inclusive safety switches protect the tester.

The illustration shows a completely mounted model with a Schuko socket wired to the base plate for the test item ready to plug in.

Outside dimensions:

600 x 880 x 370 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

476 mm wide, diameter of hood 365 mm

Reference No. Design

TS 10.011 Test hood model 2

Test hood model 3

Technical description:

The model 3 corresponds to model 2 except of the outside dimensions. Wide and flat test items can be integrated in the hood.

The illustration shows the test hood with the serially integrated base plate and a test item adapter mounted onto it for medical-technical devices.

Outside dimensions:

800 x 880 x 300 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

676 mm wide, diameter of hood 305 mm

Reference No. Design

TS 10.012 Test hood model 3

Test hoods

Test hood model 4

Reference No. Design

TS 10.013 Test hood model 4

Technical description:

The model 4 corresponds to model 2 except of the outside dimensions. Wide and flat test items can be integrated in the hood. The illustration shows the test hood with the serially integrated base plate and a test item adapter mounted onto it for bus bars.

Outside dimensions:

1200 x 880 x 300 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

1050 mm wide, diameter of hood 305 mm

Test hood model 5

Reference No. Design

TS 10.014 Test hood model 5

Technical description:

The model 5 has been designed for very wide and very high test items which are to stay within the sight field of the material tester during the test.

The test item can also be observed from the top during the test. The Makrolon test hood can be swivelled upwards without hardly any physical effort by means of two high-quality gas pressure spring, thus giving access for an easy loading.

Outside dimensions:

1200 x 880 x 900 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

1100 x 700 x 800 mm (width x depth x height)

Maximum dimensions of the test item:

1080 x 670 x 770 mm (width x depth x height)

Test hood model 6

Reference No. Design

TS 10.015 Test hood model 6

Technical description:

The model 6 allows the integration of narrow and high test items (e.g. automatic coffee dispenser).

The illustration shows the test hood with the serially integrated base plate. On request the test hood can be equipped with a pneumatic cylinder which takes over the operation of the test hood.

Outside dimensions:

500 x 1500 x 800 mm (width x depth x height), casing inclusive swivel-mounted hood

Test room:

450 mm wide, diameter of hood 605 mm

Note regarding the illustration:

On request, the model 6 can also be incorporated in a mobile station.

Test room and double test chambers

Test room model 7

Technical description:

The model 7 has been designed for very wide and very high test items. Contrary to the test hoods, this solution is a test room equipped with a Makrolon pane on the front which opens vertically. The Makrolon pane can be powerlessly opened by means of counter-weights and guide rollers.

The test room has a double rear wall and in the top part there is sufficient space to integrate switchover fields or PC's.

Outside dimensions:

1000 x 800 x 1200 mm (width x depth x height)

Test room:

950 x 600 x 600 mm (width x depth x height)

Maximum dimensions of the test item:

920 x 570 x 570 mm (width x depth x height)

Pull-out base plate:

On request the model 7 can also be equipped with a pull-out base plate which allows an easy and ergonomic loading.

Reference No.	Design
TS 10.016	Test room model 7

Double test chamber 1

Technical description:

This model has been designed for a high number of tests in multi-shift operation and allows an enormous throughput.

While the material tester loads the left-hand test chamber, the test is carried out automatically in the right-hand test chamber. An integrated switchover matrix ensures the reciprocal locking so that the material tester is always safely separated from the high voltage during loading. In both test chambers there is a GOOD and ERROR display. Customer-specific adapters can be integrated in the chamber.

Outside dimensions:

1200 x 880 x 900 mm (width x depth x height)

Test room at the left-hand side:

600 x 700 x 800 mm (width x depth x height)

Test room at the right-hand side:

600 x 700 x 800 mm (width x depth x height)

Maximum dimensions of the test item:

580 x 670 x 770 mm (width x depth x height)

Reference No.	Design
TS 10.017	Double test chamber 1

Double test chamber 2

Technical description:

This big model has been designed for a high number of tests in multi-shift operation and for very big test items. Just like the above shown small model, the double test chamber allows a high throughput.

While the material tester loads the left-hand test chamber, the test is carried out automatically in the right-hand test chamber. An integrated switchover matrix ensures the reciprocal locking so that the material tester is always safely separated from the high voltage during loading. In both test chambers there is a GOOD and ERROR display. Customer-specific adapters as well as comprehensive matrixes can be integrated in the chamber. Inclusive pull-out base plate per chamber.

Outside dimensions:

2200 x 880 x 900 mm (width x depth x height)

Test room at the left-hand side:

1100 x 700 x 800 mm (width x depth x height)

Test room at the right-hand side:

1100 x 700 x 800 mm (width x depth x height)

Maximum dimensions of the test item:

1070 x 670 x 770 mm (width x depth x height)

Technical Data	3 HE Adapter
Use:	Acceptance of 3 HE / 19" partial plug-in units of a depth of 220 mm in 6 HE racks
Width:	$2 \times 3 \text{ HE} / 42 \text{ TE} = 42 \text{ TE} + (2 \times 7 \text{ TE side panels}) = 56 \text{ TE}$ $2 \times 3 \text{ HE} / 56 \text{ TE} = 56 \text{ TE} + (2 \times 7 \text{ TE side panels}) = 70 \text{ TE}$ $2 \times 3 \text{ HE} / 70 \text{ TE} = 70 \text{ TE} + (2 \times 7 \text{ TE side panels}) = 84 \text{ TE}$ $2 \times 3 \text{ HE} / 84 \text{ TE} = 84 \text{ TE} + (2 \times 7 \text{ TE side panels}) = 98 \text{ TE}$
Material:	aluminium anodised or colourless chromated
Scope of delivery:	3 HE adapter completely mounted, consisting of: side panels, module guide rails in front, Z-rails at the rear, side cover plates, installation material

Module rack / Mains bus system

Module rack

Fig.: N 06.021 with mains bus and handles

Modular system

The concept of the module rack takes above all into account the design conform to standards and the quick changing of devices without requiring any installation.

Guide rail system

In DIN 41494 part 5 9/80 provides only for 3 HE, guide rails for 100 mm high European cards.

These guide rails are, however, completely inappropriate for exchangeable partial plug-in units because the distance between the sliding rails must always be adapted to the different cassette widths.

erfi have developed an aluminium profile for the 19" devices which is based on a guiding height of 111,76 mm (IEC 297-3).

Partial plug-in units of 14 TE grid width can be positioned on the rail system in all combinations without having to displace the guide rails.

The aluminium profile of the cassettes has been designed according to the afore mentioned rails of 100 mm guiding height (DIN standards).

Guiding rail system IEC standard
guiding height 111,76 mm

DIN and IEC standard
guiding height 100 mm

Handles at the device (cable guiding)

The opened handles of the module rack and the 19" full-size plug-in units resp. help to put in order the test cables in the cockpit. On request the module racks are optionally deliverable with handles.

Mains bus (option)

The single-phase mains voltage (230 V) is supplied to the six DIN sockets through a conductor plate which excludes the accidental inversion of plug-in connections and ensures a reliable power supply.

A plastic covering protects the active parts of the conductor plate against touching. At a distance of 14 TE there is one DIN socket. Since erfi produce all devices of a grid dimension of 14 TE, each device can be integrated in any place.

Benefit from this flexibility!

Sliding rails

For cockpits, portable and cabinet system, erfi offer sliding rails which allow the statically perfect positioning of 6 HE modular racks. Within the guiding area of the sliding rails the height of the module rack is reduced so that the HE grid dimension remains constant.

Kind of delivery

As a rule the module racks are supplied completely mounted, wired, equipped with partial plug-in units and are integrated in the cockpit, portable etc. The scope of delivery includes connection cables which conform to the respective application: for cockpits etc. with touch-proof mains adapter connector, 3 and 5 pole resp., for portables with Schuko plugs and CEKON plugs resp. 16 A, 5 pole, 6h.

Module rack / Mains bus system

Technical Data	
Application:	Acceptance of 19" partial plug-in units and European cards
Outside dimensions:	3 HE: 132,5 mm high, 482 mm wide, 273 mm deep 6 HE: 265,9 mm high, 482 mm wide, 273 mm deep
Inside dimensions:	3 HE: 1x84 partial units for a device depth of 220 mm 6 HE: 1x84 and 2x84 partial units resp. for a device depth of 220 mm
Material:	aluminium anodised and colourless chromated
Guide rails:	design with mains bus: 24 pcs. per 84 TE for 111,76 mm cassette guidance (IEC 297-3)
Mains bus:	230 V +/-10% 50 Hz max. 16 A power supply circuit board covered touch-proof
Scope of delivery:	module rack completely mounted, consisting of: side panels, module guide rails in front, Z-rails at the rear, side cover plates with handles (depending on model) installation material mains bus (option) integrated and wired, consisting of: mains bus circuit board with cover, plug-in connector DIN 41612 design size H 15 mains adapter connector, guide rails, wiring and installation material, connection cable single-phase
Weight:	3 HE with mains bus: approx. 2,6 kg 6 HE with mains bus: approx. 4,3 kg

Selection chart module rack with defined wiring

N 06.021	N 06.061	C 06.021	C 06.061	6 HE / 19 "	2 x 3 HE / 84 TE
N 06.034	N 06.062	C 06.034	C 06.062	6 HE / 19 "	1 x 6 HE / 84 TE

Note:

With this design a DIN-plug is positioned at a distance of 14 TE each. The circuit board of the mains bus ensures that all DIN-plugs are connected with one another. Since erfi manufacture all devices of a grid size of 14 TE, each device can be integrated in any place.

Mains bus system for 19" attachments / cockpits

The modern mains bus from erfi is now optionally available for all 19" table attachments and device cockpits. The bus system covers the entire width of the table attachment and like the mains bus in the module rack, ensures flexibility for the mounting of the devices. At all 14 TE one DIN-plug is positioned.

For the wiring of module racks without mains bus, the extension parts with the reference numbers N03.02A to N03.02G are available to the user.

The mains adapter plugs serve also for connection of module racks in 19 inch attachment frames of other makes for which no mating plugs are available for the supplied connection cable.

19" Casings / Portables

Stand-alone Casing

Flexible use – Thought out functionality – The 19inch portables

For the mobile use the 19inch plug-in units can also be integrated in portables.

For almost all plug-in sizes the adequate table casing can be supplied. Special features of these casings are their robustness and stability. Air ventilation is ensured by ventilation slots at the back.

Technical Data:

Material:	aluminium
Paint finish:	steel blue RAL 5011; powder coated
Scope of delivery:	inclusive mains connection cable 2 m, 19" attachment ergonomic handle (black) with the models PA03.19, PA06.42 and PA06.19.
